Sakthivel, Mangalaraja Ramalinga Viswanathan, K. Ravichandran, 2024-12-26 This book presents peer reviewed and selected papers from the 1st International Conference on Recent Advancements in Materials Science and Technology held at Karpagam Academy of Higher Education in Coimbatore India on 29 30 January 2024 Experts across the world share the latest developments in their respective fields within materials science including nanomaterials biomaterials optical materials construction materials composite materials and more Additionally addressing sustainability and the importance of international collaboration this book serves as an up to date and effective resource for researchers academics industrialists and students looking to understand the state of numerous materials science subfields

**Developments in Strategic Ceramic Materials II** Waltraud M. Kriven, Jingyang Wang, Yanchun Zhou, Dongming Zhu, Gustavo Costa, 2017-01-31 This issue contains 27 papers from The American Ceramic Society's 40th International Conference on Advanced Ceramics and Composites held in Daytona Beach Florida January 24 29 2016 This issue includes papers presented in the following Symposia and Focused Sessions Symposium 2 Advanced Ceramic Coatings for Structural Environmental and Functional Applications Symposium 10 Virtual Materials Computational Design and Ceramic Genome Symposium 11 Advanced Materials and Innovative Processing Ideas for the Industrial Root Technology Symposium 12 Materials for Extreme Environments Ultrahigh Temperature Ceramics and Emerging Technologies Symposium Carbon Nanostructures and Focused Session 1 Geopolymers and Chemically Bonded Ceramics

*Biodegradation of Plastics* Zhanyong Wang, Fan Li, Aamer Ali Shah, Ken'ichiro Matsumoto, Martin Koller, 2023-11-21 The consumption of plastic products has increased significantly with the rapid development of the global economy The total output of virgin plastics has already reached eight billion tons and the annual global plastic consumption has reached 2 8 billion tons In parallel with this high consumption rate a staggering amount of plastic waste is generated annually As a consequence of incorrect disposal of waste plastics and plastic longevity

this plastic waste is accumulating in the environment at an increasing rate Moreover since most plastic waste is corrosion resistant these plastics do not decompose in the natural environment and can cause serious environmental pollution In particular petroleum based synthetic polymers including polyethylene polyvinyl chloride polystyrene polypropylene polyethylene terephthalate and polyurethanes need hundreds of years to completely degrade in the natural environment Moreover although some aliphatic polyesters such as polybutylene succinate polycaprolactone and polylactic acid are considered biodegradable degradation of these plastics occurs only under specific microorganism activity and under specific conditions Sometimes the apparent degradation is initiated by hydrolytic activity and not microorganism or enzymatic activity Large scale synthesis and application of plastics only began after 1950 Hence the time span of plastic exposure in the environment has been too short for the adaptive evolution of natural microorganisms Indeed natural microorganisms showing high specificity for plastics and a high degradation efficiency are extremely scarce Because of the inability of most natural microorganisms to recognize and degrade plastics enzymes that can specifically degrade plastics are also scarce Many of the enzymes which are known have either an unclear mechanism of the action on the polymer a poor affinity for their substrates a low efficiency or enzyme production yield is currently low To address these problems new biotechnology strategies need to be implemented In particular new microorganisms and their enzymes need to be identified and pathways for plastic degradation and molecular modification need to be clarified to enhance the activity and stability of the degrading enzymes The current Research Topic aims to cover the recent and novel research trends in the development of plastics biodegradation including petroleum based plastics and bio based plastics under soil composted microbial and enzymatic conditions The recycling technology of degraded products is also of interest

*Advances in Glass Science and Technology* Vincenzo Maria Sglavo, 2018-06-06 In this book some recent advances in glass science and technology are collected In the first part the structure and crystallization of innovative glass compositions are analysed In the second part innovative applications are described from the use of glass in optical devices and lasers to fibres in composites micropatterned components in sensors and microdevices beads in building walls and sealing in solid oxide fuel cells

**Polymeric Systems as Antimicrobial or Antifouling Agents** Antonella Piozzi,Iolanda Francolini,2020-05-22 The rapid increase in the emergence of antibiotic resistant bacterial strains combined with a dwindling rate of discovery of novel antibiotic molecules has created an alarming issue worldwide Although the occurrence of resistance in microbes is a natural process the overuse of antibiotics is known to increase the rate of resistance evolution Under antibiotic treatment susceptible bacteria inevitably die while resistant microorganisms proliferate under reduced competition Therefore the out of control use of antibiotics eliminates drug susceptible species that would naturally limit the expansion of resistant species In addition the ability of many microbial species to grow as a biofilm has further complicated the treatment of infections with conventional antibiotics A number of corrective measures are currently being explored to reverse or slow antibiotic resistance evolution Among which one of the most promising solutions is the development of polymer based antimicrobial compounds In this Special Issue different polymer systems able to prevent or treat biofilm formation including cationic polymers antibacterial peptide mimetic polymers polymers or composites able to load and release bioactive molecules and antifouling polymers able to repel microbes by physical or chemical mechanisms are reported Their applications in the design and fabrication of medical devices in food packaging and as drug carriers is investigated 11th International Conference on Materials Science (ICMS) Jav Davaasambuu,2024-10-24 Selected peer reviewed extended articles based on abstracts presented at the 11th International Conference on Materials Science ICMS 2023 Aggregated Book Luminophores and Resistant Materials

**Materials for Energy Storage and Conversions** Basant Singh Sikarwar, Sanjeev Kumar Sharma, 2024-08-12 This book presents the select proceedings of 2nd Biennial International Symposium on Fluids and Thermal Engineering FLUTE 2023 It covers the Scientific and Technological Advances in the field of materials and their devices for advanced energy storage and relevant energy conversion Various topics covered in this book are sustainable energy conversion and storage technologies renewable energy water desalination rechargeable batteries metal ion metal air and redox flow batteries emerging materials for energy storage energy conversion devices chemical energy storage thermoelectric and thermos electrochemical cells and many more The book is useful for researchers and practitioners in the industry and academia Biocomposites and the Circular Economy Abbas S Milani, Mahdi Takaffoli, 2025-04-02 Biocomposites and the Circular Economy provides up to date

research results and insights from a multidisciplinary group of researchers across the globe Topics cover the full lifecycle of biocomposites featuring detailed research reports case studies and comprehensive literature reviews The book explores various aspects of these materials including their synthesis and processing environmental and techno economic assessments supply chain modeling and decision making frameworks tailored to sustainable practices Literature review chapters deliver thorough insights into emerging topics Additionally all research and case study chapters begin with an overview of related literature guiding readers through state of the art research and highlighting opportunities for further development The book is a valuable reference resource for academic and industrial researchers materials scientists and engineers Industrial R D and manufacturers working in the research development and manufacturing of biocomposites in a broad range of application fields Covers the full cycle of biocomposite products including early research and development phases design engineering for specific applications and end of life management of these materials Presents both detailed reports of case studies and research projects on biocomposites as well as comprehensive literature reviews of emerging topics Focuses on the use of waste and recovered feedstock in the manufacturing of biocomposites as they relate to the circular economy Features industry based projects related to biocomposites helping the reader grasp practical knowledge about the design and development of biocomposites for real world applications Includes supply chain management techno economic assessments and updates on the fillers and reinforcing constituents used in the manufacturing of biocomposites

*3D Printing of Pharmaceuticals and Drug Delivery Devices* Dimitrios A. Lamprou, 2020-07-01 The 3D printing 3DP process was patented in 1986 however only in the last decade has it begun to be used for medical applications as well as in the fields of prosthetics bio fabrication and pharmaceutical printing 3DP or additive manufacturing AM is a family of technologies that implement layer by layer processes in order to fabricate physical models based on a computer aided design CAD model 3D printing permits the fabrication of high degrees of complexity with great reproducibility in a fast and cost effective fashion 3DP technology offers a new paradigm for the direct manufacture of individual dosage forms and has the potential to allow for variations in size and geometry as well as control dose and release behavior Furthermore the low cost and ease of use of 3DP systems means that the possibility of manufacturing medicines and medical devices at the point of dispensing or at the point of use could become a reality 3DP thus offers the perfect innovative manufacturing route to address the critical capability gap that hinders the widespread exploitation of personalized medicines for molecules that are currently not easy to deliver This Special Issue will address new developments in the area of 3D printing and bioprinting for drug delivery applications covering the recent advantages and future directions of additive manufacturing for pharmaceutical products
