Developing Future-ready Learners for a Global Age Suzanne S. Choo, Woon Chia Liu, Bee Leng Chua, 2024-12-02 Suzanne S Choo Woon Chia Liu and Bee Leng Chua offer a dynamic look into the tripartite relationship between education research policy and practice that characterizes Singapore's changing education landscape. Over the years, Singapore has garnered increasing attention internationally for its world-class education system. Pushing back against the stereotypical notions of exam and teacher-centric education in Asia, the contributors to this volume discuss opportunities as well as challenges in Singapore's innovation towards constructivist, critical, culturally responsive and cosmopolitan forms of learning. Highlighting the pedagogical innovation and its context in Singapore's teacher education and schools, the authors bridge theory and practice by providing an understanding of innovative practices informed by key shifts in Singapore's education policies and the key conceptual principles informing these practices. More importantly, it provides on-the-ground empirical insights into the ways these innovative pedagogical practices are enacted in the classroom and in teacher education programmes. Each chapter provides an in-depth understanding of how these pedagogies are applied across various subject disciplines including guided problem solving in Mathematics, games-based pedagogy in Science, multimodal literacies in language, ethical criticism in Literature, Nonlinear Pedagogy in Physical Education, multicultural approaches in music and dialogic pedagogy in drama, among others. Balancing theoretical and empirical focus, this resourceful text will be of interest to students, researchers and practitioners in educational development, pedagogy and teacher education as well as policymakers across international fields in education.

The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024. Anderson and Piccinini offer the most systematic, rigorous and comprehensive account of computational implementation to date. Their robust mapping account holds that the key for establishing that a computation is physically implemented is that the physical states bear neither more nor less information than the computational states they map onto.

Physics of Radiation and Climate Michael A. Box, Gail P. Box, 2015-10-14. Our current climate is strongly influenced by atmospheric composition and changes in this composition are leading to climate change. *Physics of Radiation and Climate* takes a look at how the outward flow of longwave or terrestrial radiation is affected by the complexities of the atmosphere's molecular spectroscopy. This book examines the planet in

Sea Level Change and Maritime Boundaries Antoine Grima, 2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature of modern international law is the concept of maritime zones Each maritime area is subject to an intricate scheme of States rights and obligations Coastal geography is a fundamental component of a long standing method developed and agreed upon between States to establish the outward limits of these areas A feature of this method is the baseline In international law it is the only reference line from where the outward limits of maritime zones are measured There are clear rules on how this is established along a coast There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward thus affecting the outward limits of their maritime zones It is clear that the stability of maritime boundaries is put into question and this may bring about serious political legal and economic repercussions This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal the purpose of which is to resolve overlapping maritime claims Key questions emerge What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones What are the consequences of changes to coastal geography To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern Is international law able to address this If so in what way and what are its limits What can be done to resolve this

Our Warming Planet: Climate Change Impacts And Adaptation Martin Parry, Cynthia Rosenzweig, Manishka De Mel, 2021-10-22 This volume the second in the Lectures in Climate Change series covers the full array of climate impacts and adaptation measures It has been brought together by friends and colleagues of Dr Martin Parry Co Chair of the Intergovernmental Panel on Climate Change IPCC 2007 assessment on impacts and adaptation The writers are experts in this field and have been lead authors in many of the IPCC assessments and other major publications Lectures in Climate Change is a unique combination of written text plus

electronic slides that together comprise an informative and up to date set of presentations This second volume entitled Our Warming Planet Climate Change Impacts and Adaptation covers areas of climate impacts related to climate science methods and approaches sectors regional and national studies and policy and practice The volume comprises topics such as current and future challenges of climate change global assessments downscaling community based adaptation impacts on biodiversity food systems water resources and cities Research from across the world is presented on making science actionable through assessments early warning and early action communicating climate risk documenting the uptake of adaptation on the global front and transformation towards systemic resilience Included with this publication are downloadable electronic slides and accompanying notes of each lecture for students teachers and public speakers around the world to be better able to understand and present climate change impacts and adaptation Related Link s *Green Finance in the European Union* Marta Postuła, Mariusz Lipski, 2024-09-02 While global challenges continue to reshape the here and now public and corporate finance management needs to adapt quickly to increase the efficiency of institutions enterprises and policies to face our new reality There are very few publications that offer a comprehensive approach to the financing of environmental protection activities by the European Union This book explores this topic from various angles and levels as well as highlighting the determinants that influence micro and macro level decisions in this area It presents an in depth and unique analysis of the sources of funding for environmental measures implemented by European Union institutions against the backdrop of national expenditure by Member States and analyses the plausibility of the adopted targets in the run up to 2050 in the context of the war in Ukraine and ad hoc energy policy solutions This book is a voice in an ongoing discussion among the community of practitioners and theoreticians on sources of financing for the energy transition to achieve independence from Russian sources in the quickest possible timeframe It demonstrates that environmental measures cannot occur without the financial participation of economic actors and financial institutions particularly the capital market and further underscores the scale of involvement in environmental projects as measured by the value of green loans and green bonds covered by European financial institutions The authors offer policy recommendations for financing activities related to environmental policy notably energy transition This book will appeal to scholars students and researchers of corporate finance banking strategic and public finance management as well as policymakers and practitioners involved in green finance investments *Social Capital, Resilience and Adaptation on Small Islands* Jan Petzold, 2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for the further refinement of social capital theory and

social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection
