Predicted Paper 2 Nov 2014:

The Politics of Energy Security Johannes Kester, 2018-06-12 Energy security is known for its slippery nature and subsequent broad range of definitions. Instead of another attempt to grasp its essence, this book offers a critical reflection that problematizes the use of energy security itself. After a short historical and methodological analysis of the proliferation of energy security, *The Politics of Energy Security* unpacks three social practices that drive energy security. These include an analysis of the logics of security, a study of the relation between the materiality of sociotechnical energy systems and the knowledge people have over such systems, and a reflection on the power and politics behind energy security. Each of these are discussed and ultimately illustrated in the last chapter to show how energy security works, how it is shaped, and what role it plays within political processes. Based on a novel performative reading of energy security with its focus on ontological politics and an in-depth look at the often implicitly accepted social practices that determine how people shape and are shaped by energy security, this book will be of great interest to students and scholars of energy security and policy, political theory, international relations, critical security studies, and environmental studies more broadly.

Corrosion Problems and Solutions in Oil Refining and Petrochemical Industry Alec Groysman, 2016-10-24 This book addresses corrosion problems and their solutions at facilities in the oil refining and petrochemical industry, including cooling water and boiler feed water units. Further, it describes and analyzes corrosion control actions, corrosion monitoring, and corrosion management. Corrosion problems are a perennial issue in the oil refining and petrochemical industry as they lead to a deterioration of the functional properties of metallic equipment and harm the environment, both of which need to be protected for the sake of current and future generations. Accordingly, this book examines and analyzes typical and atypical corrosion failure cases and their prevention at refineries and petrochemical facilities, including problems with pipelines, tanks, furnaces, distillation columns, absorbers, heat exchangers, and pumps. In addition, it describes naphthenic acid corrosion, stress corrosion cracking, hydrogen damages, sulfidic corrosion, microbiologically induced corrosion, erosion corrosion, and corrosion fatigue occurring at refinery units. At last, fouling, corrosion, and cleaning are discussed in this book.

In The Will to Predict Eglė Rindzevičiūtė demonstrates how the logic of scientific expertise cannot be properly understood without knowing the conceptual and institutional history of scientific prediction She notes that predictions of future population economic growth environmental change and scientific and technological innovation have shaped much of twentieth and twenty first century politics and social life as well as government policies Today such predictions are more necessary than ever as the world undergoes dramatic environmental political and technological change But she asks what does it mean to predict scientifically What are the limits of scientific prediction and what are its effects on governance institutions and society Her intellectual and political history of scientific prediction takes as its example twentieth century USSR By outlining the role of prediction in a range of governmental contexts from economic and social planning to military strategy she shows that the history of scientific prediction is a transnational one part of the history of modern science and technology as well as governance Going beyond the Soviet case Rindzevičiūtė argues that scientific predictions are central for organizing uncertainty through the orchestration of knowledge and action Bridging the fields of political sociology organization studies and history The Will to Predict considers what makes knowledge scientific and how such knowledge has impacted late modern governance

for High Spectral-efficiency Coherent Optical Communication Networks Xiang Zhou, Chongjin Xie, 2016-04-29

Enabling Technologies for High Spectral-efficiency Coherent Optical Communication Networks presents the technological advancements that enable high spectral efficiency and high capacity fiber optic communication systems and networks. This book examines key technology advances in high spectral efficiency fiber optic communication systems and networks enabled by the use of coherent detection and digital signal processing (DSP). The first of this book's 16 chapters is a detailed introduction. Chapter 2 reviews the modulation formats, while Chapter 3 focuses on detection and error correction technologies for coherent optical communication systems. Chapters 4 and 5 are devoted to Nyquist WDM and orthogonal frequency division multiplexing (OFDM). In Chapter 6, polarization and nonlinear impairments in coherent optical communication systems are discussed. The fiber nonlinear effects in a non-dispersion-managed system are covered in Chapter 7. Chapter 8 describes linear impairment equalization, and Chapter 9 discusses various nonlinear mitigation techniques. Signal synchronization is covered in Chapters 10 and 11. Chapter 12 describes the main constraints put on the DSP algorithms by the hardware structure. Chapter 13 addresses the fundamental concepts and recent progress of photonic integration. Optical performance monitoring and elastic optical network technology are the subjects of Chapters 14 and 15. Finally, Chapter 16 discusses spatial division multiplexing and MIMO processing technology, a potential solution to solve the capacity limit of single-mode fibers. Contains basic theories and up-to-date technology advancements in each chapter. Describes how capacity approaching coding schemes based on low-density parity check (LDPC) and spatially coupled LDPC codes can be constructed by combining iterative demodulation and decoding. Demonstrates that fiber nonlinearities can be accurately described by some analytical models such as GN, EGN model. Presents impairment equalization and mitigation techniques. Enabling Technologies for High Spectral-efficiency Coherent Optical Communication Networks is a reference for researchers, engineers, and graduate students. **Multilateral Asian Security Architecture** See Seng Tan, 2015-07-16. This book

provides a comparative assessment of the material and ideational contributions of five countries to the regional architecture of post Cold War Asia In contrast to the usual emphasis placed on the role and centrality of the Association of Southeast Asian Nations ASEAN in Asia s multilateral architecture and its component institutions this book argues that the four non ASEAN countries of interest here 3 4 Australia Japan China and the United States 3 4 and Indonesia have played and continue to play an influential part in determining the shape and substance of Asian multilateralism from its pre inception to the present The work does not contend that existing scholarship overstates ASEAN s significance to the successes and failures of Asia s multilateral enterprise Rather it claims that the impact of non ASEAN stakeholders in innovating multilateral architecture in Asia has been understated Whether ASEAN has fared well or poorly as a custodian of Asia s regional architecture the fact remains that the countries considered here notwithstanding their present discontent over the state of that architecture are key to understanding the evolution of Asian multilateralism This book will be of much interest to students of Asian politics international organisations security studies and IR more generally
