ChemDiscovery Teacher Edition Olga I. Agapova, 2002 Method for Predicting Equilibrium Values in the Solvent Extraction of Nickel in Ammoniacal Systems James H. Russell, Rod L. Rickel, D. N. Nilsen, 1991 A Method for Predicting Thermal Response in Sandwich Panels P. J. Kendall, J. P. Morgan, T. E. Chappell, 1963

This study was undertaken to develop and demonstrate the validity of an analytical model for predicting the transient temperature response in honeycomb sandwich panels subjected to variable heat loads on one or both faces. A one dimensional analysis was developed which employs the ordinary heat balance considering heat transfer through the panel by conduction convection and radiation. The finite forward difference technique is employed for solving the heat balance equations. Honeycomb panels of various materials cell shapes and dimensions were subjected to a variety of heat loads and their thermal responses were recorded. The predicted thermal responses for these panels obtained with the analytical model were in good agreement with the test data.

Davidson, 2008-04-15 Considerable recent research has focused on the topic of chemical speciation in the environment. It is increasingly realised that the distribution, mobility, and biological availability of chemical elements depend not simply on their concentrations but critically on the forms in which they occur in natural systems. Continuing developments in analytical chemistry have made speciation practicable even where analytes are present at trace levels, as is often the case in natural samples. In the second edition of this book, the expertise of scientists involved in chemical speciation in various fields have been brought together to provide an overview of the current status of speciation science and indicate how the field may
