1. Susie pays for 4 muffins and 3 bananas. Calvin spends twice as much paying for 2 muffins and 16 bananas. A muffin is how many times as expensive as a banana?

(A) $\frac{3}{2}$

(B) $\frac{5}{3}$

(C) $\frac{7}{4}$

(D) 2

(E) $\frac{13}{4}$

$$4x + 3y = 5$$

$$2x + 16y = 25$$

$$1) x = y$$

$$2(4x + 3y = 5)$$

$$-8x - 6y = -25$$

$$2x + 16y = 25$$

$$-6x + 10y = 0$$

$$10y = 6x$$

$$2$$

$$5y = 3x$$

$$3$$

$$\frac{5}{3} y = x$$

are increasingly embedded into our everyday environments the objects therein become augmented with sensors processing and communication capabilities and novel interfaces The capability for objects to perceive the environment store and process data pursue goals reason about their intentions and coordinate actions in a holistic manner gives rise to the so called Intelligent Environment IE In such environments real space becomes augmented with digital content thus transcending the limits of nature and of human perception The result is a pervasive transparent infrastructure capable of recognizing responding and adapting to individuals in a seamless and unobtrusive way The realization of Intelligent Environments requires the convergence of different disciplines such as information and computer science building architecture material engineering artificial intelligence sociology art and design The 5th International Conference on Intelligent Environments IE 09 held at the Polytechnic University of Catalonia Castelldefels Barcelona Spain provides a multidisciplinary forum for researchers and engineers from across the world to present their latest research and to discuss future directions in the area of Intelligent Environments The IE 09 proceedings contain the complete conference program including full papers presented at special sessions and short papers from the doctoral colloquium and poster session In addition three thought provoking invited lectures on topics of current and future IE research are included Computational Probability Winfried K. Grassmann, 2013-03-14 Great advances have been made in recent years in the field of computational probability In particular the state of the art as it relates to queuing systems stochastic Petri nets and systems dealing with reliability has benefited significantly from these advances The objective of this book is to make these topics accessible to researchers graduate students and practitioners Great care was taken to make the exposition as clear as possible Every line in the book has been evaluated and changes have been made whenever it was felt that the initial exposition was not clear enough for the intended readership The work of major research scholars in this field comprises the individual chapters of Computational Probability The first chapter describes in nonmathematical terms the challenges in computational probability Chapter 2 describes the methodologies available for obtaining the transition matrices for Markov chains with particular emphasis on stochastic Petri nets Chapter 3 discusses how to find transient probabilities and transient rewards for these Markov chains The next two chapters indicate how to find steady state probabilities for Markov chains with a finite number of states Both direct and iterative methods are described in Chapter 4 Details of these methods are given in Chapter 5 Chapters 6 and 7 deal with infinite state Markov chains which occur frequently in queueing because there are times one does not want to set a bound for all queues Chapter 8 deals with transforms in particular Laplace transforms The work of Ward Whitt and his collaborators who have recently developed a number of numerical methods for Laplace transform inversions is emphasized in this chapter Finally if one wants to optimize a system one way to do the optimization is through Markov decision making described in Chapter 9 Markov modeling has found applications in many areas three of which are described in detail Chapter 10 analyzes discrete time queues Chapter 11 describes networks of queues and Chapter 12 deals with reliability theory *Positive*

Ely, 2008 Online assessment and more broadly the entire online learning environment provides expanded opportunities to actively and creatively engage the learner The approach the authors have taken in this book is to work from the established fundamentals of assessment applying these principles to the online environment The authors emphasize basic issues of assessment such as establishing the evidence of validity for assessments but the context of the discussion is always that of an online environment

Written by leading technology experts this clear and practical text serves as a training guide for assessing online or distance learners Readers learn how to select what should be assessed how to use written tests and projects to evaluate the skills learners have achieved how to provide feedback to learners and how to efficiently use course management software The authors believe educators involved with online training and education must have the same assessment expectations and standards as those in conventional face to face environments This book is appropriate for instructional designers and educators involved with online training and education as well as for college courses concerned with the design and delivery of distance or other forms of online instruction It also has utility as a personal reference for instructors of courses that assess students online
