Chapter 1 Project Worksheet 1 (p. 6)

Students' data tables and graphs will vary somewhat. In general, eggs will increase in size when they soak in vinegar and plain water, and they will decrease in size when they soak in liquids that have a lower concentration of water, such as salt water.

Chapter 1 Project Worksheet 2 (p. 7)

Column 4 in the table should read: 70 percent (liquid A); 92 percent (liquid B); 87 percent (liquid C); 79 percent (liquid D)

1. Liquids A and D would cause the cell to lose water; liquids B and C would cause the cell to take in water.
2. Possible answers might include shampoo, syrup, ketchup, or honey.

Section 1-1 Enrich (p. 12)

1. Transmission electron microscopes (TEM) and transmission positron microscopes (TPM) both use beams of atomic particles to view specimens. However, the TPM uses beams of positrons, which do not harm living things, whereas the TEM uses beams of electrons, which living things cannot withstand. Therefore, unlike the TEM, the TPM can be used to view living specimens.
2. Acoustic microscopes bounce high-frequency sound waves off an object. The echoes of the sound waves are then translated onto a screen as a microscopic image.
3. Transmission positron microscopes and acoustic microscopes can be used to view cells that are still alive and functioning. Electron microscopes, on the other hand, can be used to view only cells that are no longer alive.

Sociobiology and Epistemology J.H. Fetzer, 1985-08-31 The papers presented in this special collection focus upon conceptual the oretical and epistemological aspects of sociobiology an emerging discipline that deals with the extent to which genetic factors influence or control patterns of behavior as well as the extent to which patterns of behavior in turn influence or control genetic evolution The Prologue advances a compre hensive acco unt of the field of gene culture co evolution where Lumsden and Gushurst differentiate between classical sociobiology represented especially by Wilson s early work and current research on human socio biology represented by Lumsden and Wilson s later work which emphasizes interplay between genes minds and culture The specter of genetic deter minism no doubt has created considerable controversy some of which may be laid to rest by Hanna s analysis of the ambiguous notion of a genetic program which

indicates the necessity for distinguishing between descriptive and prescriptive dimensions of this complex concept Brandon offers a framework for assessing the respective contributions of nature and of nurture by advancing a means for measuring genetic and cultural influences upon inheritance which supports the conclusion that evolving patterns of behavior do not always maximize inclusive fitness contrary to what socio biologists have claimed The influence of culture upon genetic evolution of course can be adequately appraised only when a suitable account of culture itself has been found a desideratum Smillie attempts to satisfy by utilizing the notion of cinfo as culturally transmitted ecological information a resource other species tend not to exploit
