Foundations of Software Science and Computation Structures M. Nivat, 1998-03-11 This book constitutes the refereed proceedings of the First International Conference on the Foundations of Software Science and Computation Structures FoSSaCS 98 held as part of the Joint European Conferences on Theory and Practice of Software ETAPS 98 in Lisbon Portugal in March April 1998 The 19 revised full papers presented in the book were carefully selected from a total of 44 submissions Among the topics covered are formal specification automata theory term rewriting and rewriting systems process algebras formal language theory type theory event structures and iteration theory

Foundations of Software Science and Computational Structures Luke Ong, 2010-03-16 This book constitutes the refereed proceedings of the 13th International Conference on Foundations of Software Science and Computational Structures FOSSACS 2010 held in Paphos Cyprus in March 2010 as part of ETAPS 2010 the European Joint Conferences on Theory and Practice of Software The 25 revised full papers presented together with the abstract of the keynote lecture were carefully reviewed and selected from 86 full paper submissions The papers are organized in topical sections on semantics of programming languages probabilistic and randomised computation concurrency and process theory modal and temporal logics verification categorical and coalgebraic methods as well as lambda calculus and types

Foundations of Software Science and Computation Structures Mogens Nielsen, Uffe Engberg, 2003-08-01 ETAPS 2002 is the 6th instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises five conferences FOSSACS FASE ESOP CC TACAS thirteen satellite workshops ACL2 AGT CMCS COCV DCC INT LDFA SC SFEDL SLAP SPIN TPTS and VISS eight invited lectures not including those that are specific to the satellite events and several tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Foundations of Software Science and Computational Structures Roberto Amadio, 2008-03-18 This book constitutes the refereed proceedings of the 11th International Conference on Foundations of Software Science and Computational Structures FOSSACS 2008 held in Budapest Hungary in March April 2008 as part of ETAPS 2008 the European Joint Conferences on Theory and Practice of Software The 33 revised full papers presented together with the abstract of 1 invited talk were carefully reviewed and selected from 124 submissions A broad variety of theories and methods to support analysis synthesis transformation and verification of programs and software systems are addressed including the following topics algebraic models automata and language theory behavioural equivalences categorical models computation

processes over discrete and continuous data infinite state systems computational structures logics of programs modal spatial and temporal logics models of concurrent reactive distributed and mobile systems process algebras and calculi semantics of programming languages software specification and refinement type systems and type theory fundamentals of security semi structured data program correctness and verification *Cumulated Index to the Books*, 1999 *Mathematical Foundations of Computer Science 1988* Michal Chytil, Ladislav Janiga, Václav Koubek, 1988 This volume contains 11 invited lectures and 42 communications presented at the 13th Conference on Mathematical Foundations of Computer Science MFCS 88 held at Carlsbad Czechoslovakia August 29 September 2 1988 Most of the papers present material from the following four fields complexity theory in particular structural complexity concurrency and parallelism formal language theory semantics Other areas treated in the proceedings include functional programming inductive syntactical synthesis unification algorithms relational databases and incremental attribute evaluation **Mathematical Foundations of Image Processing and Analysis, Volume 1** Jean-Charles Pinoli, 2014-07-09 Image processing and image analysis are typically important fields in information science and technology By image processing we generally understand all kinds of operation performed on images or sequences of images in order to increase their quality restore their original content emphasize some particular aspect of the information or optimize their transmission or to perform radiometric and or spatial analysis By image analysis we understand however all kinds of operation performed on images or sequences of images in order to extract qualitative or quantitative data perform measurements and apply statistical analysis Whereas there are nowadays many books dealing with image processing only a small number deal with image analysis The methods and techniques involved in these fields of course have a wide range of applications in our daily world industrial vision material imaging medical imaging biological imaging multimedia applications satellite imaging quality control traffic control and so on **Mastering Algebra** Sachin Nambeesan, 2025-02-20 Mastering Algebra is a comprehensive and student friendly exploration of fundamental principles and advanced applications of algebra tailored specifically for undergraduate students We provide a valuable resource for those seeking to deepen their understanding of algebraic theory and its diverse range of applications across various disciplines Our book starts with foundational concepts such as algebraic manipulation equation solving and functions It then progresses to more advanced topics including linear algebra abstract algebra and algebraic geometry offering a seamless transition from basic to advanced algebraic theory What sets this book apart is its emphasis on clarity coherence and practical relevance Each chapter is meticulously crafted to provide clear explanations of complex concepts supported by illustrative examples and thought provoking exercises that encourage active learning and critical thinking Furthermore Mastering Algebra highlights the practical applications of algebra in fields such as physics computer science engineering and economics demonstrating its importance and versatility in solving real world problems Whether you are a mathematics major looking to deepen your understanding of algebraic theory or a student from another discipline seeking to strengthen your

quantitative skills this book is your essential companion on the journey to mastering algebra Prepare to embark on an enriching intellectual adventure that will empower you to unlock the full potential of algebraic concepts and their applications

Coordination Languages and Models , Biomateriomics Steven W. Cranford, Markus J. Buehler, 2012-05-23 Biomateriomics is the holistic study of biological material systems While such systems are undoubtedly complex we frequently encounter similar components universal building blocks and hierarchical structure motifs which result in a diverse set of functionalities Similar to the way music or language arises from a limited set of music notes and words we exploit the relationships between form and function

in a meaningful way by recognizing the similarities between Beethoven and bone or Shakespeare and silk Through the investigation of material properties examining fundamental links between processes structures and properties at multiple scales and their interactions materiomics explains system functionality from the level of building blocks Biomateriomics specifically focuses the analysis of the role of materials in the context of biological processes the transfer of biological material principles towards biomimetic and bioinspired applications and the study of interfaces between living and non living systems The challenges of biological materials are vast but the convergence of biology mathematics and engineering as well as computational and experimental techniques have resulted in the toolset necessary to describe complex material systems from nano to macro Applying biomateriomics can unlock Nature s secret to high performance materials such as spider silk bone and nacre and elucidate the progression and diagnosis or the treatment of diseases Similarly it contributes to develop a de novo understanding of biological material processes and to the potential of exploiting novel concepts in innovation material synthesis and design

Handbook of Process Algebra J.A. Bergstra,A. Ponse,S.A. Smolka,2001-03-16 Process Algebra is a formal description technique for complex computer systems especially those involving communicating concurrently executing components It is a subject that concurrently touches many topic areas of computer science and discrete math including system design notations logic concurrency theory specification and verification operational semantics algorithms complexity theory and of course algebra This Handbook documents the fate of process algebra since its inception in the late 1970 s to the present It is intended to serve as a reference source for researchers students and system designers and engineers interested in either the theory of process algebra or in learning what process algebra brings to the table as a formal system description and verification technique The Handbook is divided into six parts spanning a total of 19 self contained Chapters The organization is as follows Part 1 consisting of four chapters covers a broad swath of the basic theory of process algebra Part 2 contains two chapters devoted to the sub specialization of process algebra known as finite state processes while the three chapters of Part 3 look at infinite state processes value passing processes and mobile processes in particular Part 4 also three chapters in length explores several extensions to process algebra including real time probability and priority The four chapters of Part 5 examine non interleaving process algebras while Part 6 s three chapters address process algebra tools and applications
