Theoretical Physics Josef Honerkamp, Hartmann Römer, 2012-12-06 This introduction to classical theoretical physics emerged from a course for students in the third and fourth semester which the authors have given several times at the University of Freiburg Germany The goal of the course is to give the student a comprehensive and coherent overview of the principal areas of classical theoretical physics In line with this goal the content the terminology and the mathematical techniques of theoretical physics are all presented along with applications to serve as a solid foundation for further courses in the basic areas of experimental and theoretical physics In conceiving the course the authors had four interdependent goals in mind the presentation of a consistent overview even at this elementary level the establishment of a well balanced interactive relationship between physical content and mathematical methods a demonstration of the important applications of physics and an acquisition of the most important mathematical techniques needed to solve specific problems In relation to the first point it was necessary to limit the amount of material treated This introductory course was not intended to preempt a later primarily On the other hand we aimed for a certain completeness in theoretical course
