George Lasry, 2018 Cryptography the art and science of creating secret codes and cryptanalysis the art and science of breaking secret codes underwent a similar and parallel course during history Both fields evolved from manual encryption methods and manual codebreaking techniques to cipher machines and codebreaking machines in the first half of the 20th century and finally to computerbased encryption and cryptanalysis from the second half of the 20th century However despite the advent of modern computing technology some of the more challenging classical cipher systems and machines have not yet been successfully cryptanalyzed For others cryptanalytic methods exist but only for special and advantageous cases such as when large amounts of ciphertext are available Starting from the 1990s local search metaheuristics such as hill climbing

genetic algorithms and simulated annealing have been employed and in some cases successfully for the cryptanalysis of several classical ciphers. In most cases however results were mixed and the application of such methods rather limited in their scope and performance. In this work a robust framework and methodology for the cryptanalysis of classical ciphers using local search metaheuristics mainly hill climbing and simulated annealing is described. In an extensive set of case studies conducted as part of this research this new methodology has been validated and demonstrated as highly effective for the cryptanalysis of several challenging cipher systems and machines which could not be effectively cryptanalyzed before and with drastic improvements compared to previously published methods. This work also led to the decipherment of original encrypted messages from WWI and to the solution for the first time of several public cryptographic challenges.

**Artificial Intelligence & Games** Georgi Togeli, 2024-09-03. As has been pointed out by several industrial game AI developers the lack of behavioral modularity across games and in game tasks is detrimental for the development of high quality AI. A 605 171 An increasingly popular method for ad hoc behavior authoring that eliminates the modularity limitations of FSMs and BTs is the utility based AI approach which can be used for the design of control and decision making systems in games. 425 557 Following this approach instances in the game get assigned a particular utility function that gives a value for the importance of the particular instance. 10 169 For instance the importance of an enemy being present at a particular distance or the importance of an agent's health being low in this particular context. Given the set of all utilities available to an agent and all the options it has utility based AI decides which is the most important option it should consider at this moment. 426 The utility based approach is grounded in the utility theory of economics and is based on utility function design. The approach is similar to the design of membership functions in a fuzzy set. A utility can measure anything from observable objective data e.g. enemy health to subjective notions such as emotions mood and threat. The various utilities about possible actions or decisions can be aggregated into linear or non linear formulas and guide the agent to take decisions based on the aggregated utility. The utility values can be checked every n frames of the game. So while FSMs and BTs would examine one decision at a time utility based AI architectures

**Innovations in Office Design** Diane Stegmeier, 2008-02-25. Diane Stegmeier's landmark findings on workplace behavior in the corporate setting will prove vital in determining workplace strategy over the next ten years. Prentice Knight CEO of CoreNet Global. The author takes a truly comprehensive approach to understanding the business barriers to the successful implementation of physical space design. The Critical Influence methodology identifies areas of resistance to change and addresses them enabling the architectural and design firm to do what they do best create the appropriate workplace solution. Foreword by Greg Bendis. One of the most difficult aspects of facility management is the inability to link environmental improvements with measurable productivity results. Stegmeier's observations in this area are based on hard facts and real research not just abstract theories. Her work is an essential tool for any professional looking to justify facility improvements that can actually support and advance the mission of the
