Thermodynamics John Keith Roberts,1928 **Numerical Models for Differential Problems** Alfio Quarteroni,2010-01-22

In this text we introduce the basic concepts for the numerical modelling of partial differential equations We consider the classical elliptic parabolic and hyperbolic linear equations but also the diffusion transport and Navier Stokes equations as well as equations representing conservation laws saddle point problems and optimal control problems Furthermore we provide numerous physical examples which underline such equations In particular we discuss the algorithmic and computer implementation aspects and provide a number of easy to use programs The text does not require any previous advanced mathematical knowledge of partial differential equations the absolutely essential concepts are reported in a preliminary chapter It is therefore suitable for students of bachelor and master courses in scientific disciplines and recommendable to those researchers in the academic and extra academic domain who want to approach this interesting branch of applied mathematics **Optimal Control of Partial Differential Equations** Andrea Manzoni,Alfio Quarteroni,Sandro

Salsa,2022-01-01 This is a book on optimal control problems OCPs for partial differential equations PDEs that evolved from a series of courses taught by the authors in the last few years at Politecnico di Milano both at the undergraduate and graduate levels The book covers the whole range spanning from the setup and the rigorous theoretical analysis of OCPs the derivation of the system of optimality conditions the proposition of suitable numerical methods their formulation their analysis including their application to a broad set of problems of practical relevance The first introductory chapter addresses a handful of representative OCPs and presents an overview of the associated mathematical issues The rest of the book is organized into three parts part I provides preliminary concepts of OCPs for algebraic and dynamical systems part II addresses OCPs involving linear PDEs mostly elliptic and parabolic type and quadratic cost functions part III deals with more general classes of OCPs that stand behind the advanced applications mentioned above Starting from simple problems that allow a hands on treatment the reader is progressively led to a general framework suitable to face a broader class of problems Moreover the inclusion of many pseudocodes allows the reader to easily implement the algorithms illustrated throughout the text The three parts of the book are suitable to readers with variable mathematical backgrounds from advanced undergraduate to Ph D levels and beyond We believe that applied mathematicians computational scientists and engineers may find this book useful for a constructive approach toward the solution of OCPs in the context of complex applications **Biology in Time and**
