

What Is A Magnetic Field?

- Magnetic fields, invisible force fields surrounding magnets and moving electric charges, exert a force on other magnetic materials or moving charges
- These fields, characterized by direction and magnitude, can be visualized through field lines, with their density indicating field strength
- Magnetic fields are primarily created by permanent magnets (such as iron, cobalt, and nickel due to their ferromagnetic properties) and electric currents
- The relationship between electric and magnetic fields is studied in electromagnetism, with principles like electromagnetic induction and Lorentz force
- Applications of magnetic fields range from electric motors and MRI to data storage and magnetic levitation trains
