Abstract *Background:* The use of mobile health (mHealth) technologies to improve health care delivery and patient health outcomes is growing rapidly. However, the use of mHealth technologies is often limited by a lack of evidence on their effectiveness and safety. *Objective:* The purpose of this study was to evaluate the effectiveness and safety of mHealth technologies for improving health care delivery and patient health outcomes. *Methods:* A systematic review of the literature was conducted to identify studies that evaluated the effectiveness and safety of mHealth technologies. The review included studies published between 2000 and 2015. The studies were evaluated based on their methodological quality and the results of their effectiveness and safety evaluations. *Results:* The review identified 10 studies that met the inclusion criteria. The studies evaluated the effectiveness and safety of mHealth technologies for improving health care delivery and patient health outcomes. The results of the effectiveness evaluations were mixed, with some studies showing positive results and others showing no significant results. The results of the safety evaluations were generally positive, with most studies showing no significant adverse effects. *Conclusions:* The use of mHealth technologies for improving health care delivery and patient health outcomes is promising, but more research is needed to evaluate their effectiveness and safety. *Keywords:* mHealth, effectiveness, safety, health care delivery, patient health outcomes.
