Areas of Parallelograms and Triangles

18. A company wants to paint its logo on the side of a building. The entire area needs to be covered with a primer. The two triangular areas will be painted red, the rectangle containing the company's name will be white, and the rest of the parallelogram will be yellow.

- Find the area for each different color.
- Find the area that must be painted with primer.

Handwritten notes:
 Area of parallelogram = 80 sq ft
 Area of rectangle = 16 sq ft
 Area of triangles = 16 sq ft
 Total area = 112 sq ft

19. A scale drawing of the side view of a house is shown at the right. Find the total area (in square inches) of the side of the house in the drawing.

20. **Open-Ended** Using graph paper, draw a figure with area 42 units² made up of a parallelogram and a triangle.

Coordinate Geometry Find the area of a polygon with the given vertices.

- $A(2, 2), B(5, 2), C(3, -1), D(0, -1)$
- $A(1, 4), B(-2, -2), C(-7, -2), D(-4, 4)$
- $A(5, -3), B(-1, -3), C(-1, 2), D(5, 6)$
- $A(5, 0), B(5, 8), C(-1, 7), D(-1, -6)$

Find the area of each figure.

28. **Reasoning** A parallelogram has a height of 6 units and a corresponding base of 7 units. What is the area of each triangle formed when one diagonal of the parallelogram is drawn? What is the area of each small triangle formed when two diagonals are drawn?
29. A parallelogram has sides 24 m and 5 m. The height corresponding to a 24-m base is 4 m. What is the height corresponding to a 5-m base?

Prentice Hall Algebra Prentice-Hall, Inc,2002-09 Prentice Hall Mathematics offers comprehensive math content coverage introduces basic mathematics concepts and skills and provides numerous opportunities to access basic skills along with abundant remediation and intervention activities **New York Math: Math B** ,2000 **Scott Foresman-Addison Wesley Mathematics** ,2008 *Abstract Algebra and Famous Impossibilities* Sidney A. Morris,Arthur Jones,Kenneth R. Pearson,2022-11-26 This textbook develops the abstract algebra necessary to prove the impossibility of four famous mathematical feats squaring the circle trisecting the angle doubling the cube and solving quintic equations All the relevant concepts about fields are introduced concretely with the geometrical questions providing motivation for the algebraic concepts By focusing on problems that are as easy to approach as they were fiendishly difficult to resolve the authors provide a uniquely accessible introduction to the power of abstraction Beginning with a brief account of the history of these fabled problems the book goes on to present the theory of fields polynomials field extensions and irreducible polynomials Straightedge and compass constructions establish the standards for constructability and offer a glimpse into why squaring doubling and trisecting appeared so tractable to professional and amateur mathematicians alike However the connection between geometry and algebra allows the reader to bypass two millennia of failed geometric attempts arriving at the elegant algebraic conclusion that such constructions are impossible From here focus turns to a challenging problem within algebra itself finding a general formula for solving a quintic polynomial The proof of the impossibility of this task is presented using Abel s original approach *Abstract Algebra and Famous Impossibilities* illustrates the enormous power of algebraic abstraction by exploring several notable historical triumphs This new edition adds the fourth impossibility solving general quintic equations Students and instructors alike will appreciate the illuminating examples conversational commentary and engaging exercises that accompany each section A first course in linear algebra is assumed along with a basic familiarity with integral calculus Elementary Algebra for College Students Prentice-Hall Staff,2000 *The Educational Times, and Journal of the College of Preceptors* ,1892 **Resources in Education** ,1996-04 Education Outlook ,1892 *The Budget Report of the State Board of Finance and Control to the General Assembly, Session of [1929-] 1937* Connecticut. Jan W. ter Maten,2011-03-25 Simulation based on mathematical models plays a major role in computer aided design of integrated circuits ICs Decreasing structure sizes increasing packing densities and driving frequencies require the use of refined mathematical models and to take into account secondary parasitic effects This leads to

very high dimensional problems which nowadays require simulation times too large for the short time to market demands in industry Modern Model Order Reduction MOR techniques present a way out of this dilemma in providing surrogate models which keep the main characteristics of the device while requiring a significantly lower simulation time than the full model With Model Reduction for Circuit Simulation we survey the state of the art in the challenging research field of MOR for ICs and also address its future research directions Special emphasis is taken on aspects stemming from miniturisations to the nano scale Contributions cover complexity reduction using e g balanced truncation Krylov techniques or POD approaches For semiconductor applications a focus is on generalising current techniques to differential algebraic equations on including design parameters on preserving stability and on including nonlinearity by means of piecewise linearisations along solution trajectories TPWL and interpolation techniques for nonlinear parts Furthermore the influence of interconnects and power grids on the physical properties of the device is considered and also top down system design approaches in which detailed block descriptions are combined with behavioral models Further topics consider MOR and the combination of approaches from optimisation and statistics and the inclusion of PDE models with emphasis on MOR for the resulting partial differential algebraic systems The methods which currently are being developed have also relevance in other application areas such as mechanical multibody systems and systems arising in chemistry and to biology The current number of books in the area of MOR for ICs is very limited so that this volume helps to fill a gap in providing the state of the art material and to stimulate further research in this area of MOR Model Reduction for Circuit Simulation also reflects and documents the vivid interaction between three active research projects in this area namely the EU Marie Curie Action ToK project O MOORE NICE members in Belgium The Netherlands and Germany the EU Marie Curie Action RTN project COMSON members in The Netherlands Italy Germany and Romania and the German federal project System reduction in nano electronics SyreNe
