Serving Vulnerable and Marginalized

Populations in Social and Educational Contexts Anies Al-Hroub,Sally Reis,Joseph Madaus,Itab Shuayb,2024-04-26

There is evidence that the global COVID 19 crisis is exacerbating existing inequalities and marginalization of vulnerable groups including exceptional learners stateless street migrant and refugee children and youths and the limited use of frameworks of emergency planning with and for marginalized and at risk individuals These challenges are multi sectoral and intersecting and they require multi and interdisciplinary interventions to inform inclusive responses These issues include being at a greater risk of excluding vulnerable learners from gaining access to equitable education online remote and blended education Intersecting forms of discrimination such as gender socioeconomic and legal status further exacerbate the problem This has alerted us to examine the living conditions of marginalized and vulnerable populations around the globe and to reveal their experiences problems and needs from an educational perspective thus bringing insights into their vulnerabilities during the pandemic Science Books & Films ,1982 **The Teaching and Learning of Mathematics at University**

Level Derek Holton,2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past
