with molecules and atoms This book is written in the same engaging manner as Ball's popular book on chemistry Designing the Molecular World and it links insights from chemistry biology and physics with those from engineering as it outlines the various areas in which new materials will transform our lives in the twenty first century The chapters provide vignettes from a broad range of selected areas of materials science and can be read as separate essays The subjects include photonic materials materials for information storage smart materials biomaterials biomedical materials materials for clean energy porous materials diamond and hard materials new polymers and surfaces and interfaces
