Science Curriculum Topic Study Page Keeley, Joyce Tugel, 2019-09-11 Today's science standards reflect a new vision of teaching and learning. How to make this vision happen. Scientific literacy for all students requires a deep understanding of the three dimensions of science education: disciplinary content, scientific and engineering practices, and crosscutting concepts. If you actively engage students in using and applying these three dimensions within curricular topics, they will develop a scientifically based and coherent view of the natural and designed world. The latest edition of this best seller, newly mapped to the Framework for K-12 Science Education and the Next Generation Science Standards (NGSS) and updated with new standards and research-based resources, will help science educators make the shifts needed to reflect current practices in curriculum, instruction, and assessment. The methodical study process described in this book will help readers intertwine content, practices, and crosscutting concepts. The book includes an increased emphasis on STEM, including topics in science, technology, and engineering. 103 separate curriculum topic study guides arranged in six categories: Connections to content knowledge, curricular and instructional implications, concepts and specific ideas, research on student learning, K-12 articulation, and assessment. Teachers and those who support teachers will appreciate how Curriculum Topic Study helps them reliably analyze and interpret their standards and translate them into classroom practice, thus ensuring that students achieve a deeper understanding of the natural and designed world. Socio-Metabolic Perspectives on the Sustainability of Local Food Systems Eva Fraňková, Willi Haas, Simron J. Singh, 2018-01-09 This book delves into diverse local food systems and critically assesses their ecological and societal benefits and trade offs their limits and opportunities for improving sustainability of food production and framework conditions which either hinder or promote their development More and more people with gradually meat heavier diets will demand growth in food production whilst our increasingly industrialized and globalized agri food system has already caused serious sustainability problems in the past This calls for a change in the way we produce distribute and consume food A re emerging debate on food security and food sovereignty seems to support this quest But what are the promising alternatives to mainstream developments Such a discussion regarding sustainability of local food systems requires a sound systemic understanding and thus invites a socio metabolic reading of local cases by analyzing the nexus between material and energy flows as well as land and time use This approach is needed to complement the so far mostly qualitatively based local food studies Applying socio metabolic approaches to local food systems fosters a better understanding of promises and pitfalls for sustainable pathways in the future

Infrastructure John W. Dover, 2015-07-16 With more than half of the world's population now living in urban areas it is vitally important that towns and cities are healthy places to live. The principal aim of this book is to synthesize the disparate literature on the use of vegetation in the built environment and its multifunctional benefits to humans. The author reviews issues such as contact with wildlife and its immediate and long term effects on psychological and physical wellbeing; the role of vegetation in removing health-damaging pollutants from the air; green roofs and green walls which provide insulation, reduce energy use and decrease the carbon footprint of buildings; and structural vegetation such as street trees providing shading and air circulation whilst also helping to stop flash floods through surface drainage. Examples are used throughout to illustrate the practical use of vegetation to improve the urban environment and deliver ecosystem services. Whilst the underlying theme is the value of biodiversity, the emphasis is less on existing high-value green spaces such as nature reserves, parks and gardens than on the sealed surfaces of urban areas: building surfaces, roads, car parks, plazas etc. The book shows how these and the spaces they encapsulate can be modified to meet current and future environmental challenges including climate change. The value of existing green space is also covered to provide a comprehensive textbook of international relevance.
