Section: Water Use and Management

Read the passage below and answer the questions that follow.

Industry accounts for 19 percent of water used in the world. Water is used to manufacture goods, to dispose of waste, and to generate power. The amount of water needed to manufacture everyday items can be astounding. For instance, nearly 1,000 L of water are needed to produce 1 kg of aluminum, and almost 500,000 L of water are needed to manufacture a car. Vast amounts of water are required to produce computer chips and semiconductors.

Most of the water that is used in industry is used to cool power plants. Power-plant cooling systems usually pump water from a surface water source such as a river or lake, carry the water through pipes in a cooling tower, and then pump the water back into the source. The water that is returned is usually warmer than the source, but it is generally clean and can be used again.

IDENTIFYING MAIN IDEAS

One reading skill is the ability to identify the main idea of a passage. The main idea is the main focus or key idea. Frequently, a main idea is accompanied by supporting information that offers detailed facts about main ideas.

In the space provided, write the letter of the term or phrase that best completes each statement or best answers each question.

- _____ 1. How much water is needed to manufacture a car?
a. 50,000 L. c. 1,000 L.
b. 500,000 L. d. 100,000 L.
- _____ 2. The amount of water used in the world for industry is
a. 500,000 L. c. 19 percent.
b. vast amounts. d. 1,000 L.
- _____ 3. Water is used in industry mainly to
a. cool power plants. c. create steam, which is then used
for energy. d. clean huge cooling towers.
b. keep machinery running.
- _____ 4. Water that is returned to a river from a power plant cooling tower is
a. cooler than the river and contaminated.

Turfgrass Water Conservation Stephen T. Cockerham, Bernd Leinauer, 2011-01-01 Water is an increasingly valuable and limited resource often perceived as being wasted on turfgrass. This much anticipated second edition brings clear current science based information on turfgrass management and water conservation to turf managers and researchers alike. Inside you'll find a look at the current understanding of water use as well as new technologies being researched to reduce water use by turfgrass. Attention is paid to water quality and turfgrass as a key part of the urban environment how integrating turfgrass with other landscape uses of water can be part of a conservation plan and how various water qualities including reclaimed water can be part of a management plan. Chapters also cover advances in drought heat and salinity stress tolerance the role of water in modified root zone media and native soils water management technologies considerations for construction and management of urban green spaces including parks and golf courses water depletion pesticide and nutrient runoff. A chapter summarizing the practical application of the science in each chapter rounds out the text presenting the information in an immediately useable format. Includes 10 tables and figures 20 color photos a U.S. customary to metric conversion table and an 8 page glossary. [Selected Water Resources Abstracts](#), 1981-10 [Handbook Of Environment And Waste Management: Air And Water Pollution Control](#) Yung-tse Hung, Lawrence K Wang, Nazih K Shammass, 2012-02-13 The Handbook of Environment and Waste Management Volume 1 Air and Water Pollution Control is a comprehensive compilation of topics that are at the forefront of many technical advances and practices in air and water pollution control. These include air pollution control water pollution control water treatment wastewater treatment industrial waste treatment and small scale wastewater treatment. Internationally recognized authorities in the field of environment and waste management contribute chapters in their areas of expertise. This handbook is an essential source of reference for professionals and researchers in the areas of air water and waste management and as a text for advanced undergraduate and graduate courses in these fields. *Water Footprints and Sustainable Development* Suhaib A. Bandh, Fayaz A. Malla, 2024-08-09 Water Footprints and Sustainable Development serves as the sole comprehensive volume of the role of waste management for sustainable development. It provides an overview of Global Scenario of water footprints in water smart cities and technologies and investigates the critical factors that enable the sustainable developments of various industries in respect to water resources management. The goal of this book is to introduce the reader to the current technologies used for reducing water footprints and to offer the necessary information and tools for sustainable development. Provides detailed coverage of the role of Water Energy and Food Nexus with respect to sustainability. Covers methods such as lifecycle assessment sustainability assessment multi criteria decision making and multi objective optimization modes. Includes key techniques for water resources management and sustainable development. **Physical-Chemical Treatment of Water and Wastewater** Arcadio P. Sincero, Gregoria A. Buras, 2003-11-30 We the editors have long believed that a strong knowledge of relatively simple economic and engineering concepts is valuable in solving water management problems The lack of such knowledge has been apparent to us in some of the journal articles research proposals and books we have reviewed The articles which have been written concerning specific local water economies and management issues are scattered over a wide variety of journals making them hard to access Most of the extensive water resources literature is concerned with large regional water projects or with narrow technical and regional issues This book was written to make practical economic and engineering concepts readily available to urban water supply managers thereby filling a gap in the available literature It is concerned with decisions made daily monthly or annually by managers of urban water supply systems The book includes basic chapters presenting supply and cost concepts

calculation of demand elasticities use of marketing concepts public goods analysis water markets industrial water demand and the use of price in water conservation The authors have included multiple examples of how these concepts can aid in managing urban water supply The water provider is generally a governmental entity or regulated private utility Most books on public utilities and their management emphasize gas electricity or telephone rather than water Water is different because of its variations in quality by source and the necessity for proper disposal of waste water
