The ethnographic data is based on full immersion in uniform living in dorm but also includes thematic analysis of content, field notes and reflection. It features recommendations of international value for correctional officer training and identifies context and content needs. Now completely revised and updated and in its fifth edition, the handbook maps the ten domains of the Information Security Common Body of Knowledge and provides a complete understanding of all the items in it. Communicable Crises Deborah E. Gibbons, 2007-03-01. This volume makes a significant contribution to the crisis management literature. It also adds to our inchoate understanding of network governance, temporary teams and task forces, communities of practice, alliances and virtual organizations. It hints that the distinction between networks and organizations may be somewhat spurious, a matter of degree rather than kind. Indeed, it seems that this distinction may derive more from mental models in which we consistently reify organizations than anything else. Finally, the volume emphasizes the functional importance of leadership in network governance and puzzles over its provision in the absence of hierarchy. As such, it adds to the contributions made by Marc Granovetter 1973, John Seeley Brown and Paul Duguid 1991, Bart Nooteboom 2000, Paul J. DiMaggio 2001, John Arquilla and David Ronfeldt 2001, Laurence O. Toole and Ken Meier 2004 and others as well as Nancy Roberts' seminal work on wicked problems and hastily formed teams. The result is a product the editor and the contributors can be proud of. Overall, it is one that will edify, surprise and delight its readers.

According to Aulus Gellius, Archytas the Ancient Greek philosopher, mathematician, astronomer, statesman and strategist was reputed to have designed and built around 400 BC the first artificial self-propelled flying device, a bird-shaped model propelled by a jet of what was probably steam, said to have actually flown some 200 metres. This machine, which its inventor called The Pigeon, may have been suspended on a wire or pivot for its flight. The 9th-century Muslim Berber inventor Abbas Ibn Firnas's glider is considered by John Harding to be the first attempt at heavier-than-air flight in aviation history.
