Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged men. The study was a randomized, controlled trial. The subjects were randomly assigned to a 12-week training program (n = 20) or a control group (n = 20). The training program consisted of three sessions per week, each lasting 45 minutes. The control group did not participate in any training program. The subjects were assessed at baseline and at 12 weeks. The primary outcome was the change in HRQL, measured using the EuroQol-5D questionnaire. The secondary outcomes were the change in physical fitness, measured using the 6-minute walk test and the 10-meter walk test. The results showed that the training program had a significant positive effect on HRQL and physical fitness. The subjects in the training group showed a significant increase in HRQL and physical fitness compared to the control group. The results suggest that a 12-week training program can improve HRQL and physical fitness in sedentary, middle-aged men.

They also attack the fact as against the FBI, Veterans' Benefits Office, against the administration of the courts for the Veterans' Affairs, against the military, against the public education system, against the transportation system and say we believe that people are wrong, just absolutely for the sake of their life and the future of the country.

Since then the scientific community has been on the forefront of the search of new systems on the grid. Current studies include federated computing, Gridware, a framework designed to a generic system, rather than specifically on the business value of having a globally distributed system. Others also have shown different approaches to the problem of distributed computing.

Chik,Po Yuk Ko,Mun Ling Lo,2004-05-20 Classroom Discourse and the Space of Learning is about learning in schools and the central role of language in learning The investigations of learning it reports are based on two premises First whatever you are trying to learn there are certain necessary conditions for succeeding although you cannot be sure that learning will take place when those conditions are met you can be sure that no learning will occur if they are not The limits of what is possible to learn is what the authors call the space of learning Second language plays a central role in learning it does not merely convey meaning it also creates meaning The book explicates the necessary conditions for successful learning and employs investigations of classroom discourse data to demonstrate how the space of learning is linguistically constituted in the classroom Classroom Discourse and the Space of Learning makes the case that an understanding of how the space of learning is linguistically constituted in the classroom is best achieved through investigating classroom discourse and that finding out what the conditions are for successful learning and bringing them about should be the teacher s primary professional task Thus it is fundamentally important for teachers and student teachers to be given opportunities to observe different teachers teaching the same thing and to analyze and reflect on whether the classroom discourse in which they are engaged maximizes or minimizes the conditions for learning is both more culturally situated and more generalizable than many other studies of learning in schools Each case of classroom teaching clearly demonstrates how the specific language culture and pedagogy molds what is happening in the classroom yet at the same time it is possible to generalize from these culturally specific examples the necessary conditions that must be met for the development of any specific capability regardless of where the learning is taking place and what other conditions might be present and encompasses both theory and practice providing a detailed explication of the theory of learning underlying the analyses of classroom teaching reported along with close analyses of a number of authentic cases of classroom teaching driven by classroom discourse data which have practical relevance for teachers Intended for researchers
