VMC20

The VMC20 handles all logic control and commands the proportional steering valve. It communicates directly with the WGU and accepts operator and truck data signals. During normal operation, the green LED on the sides of the WGU and VMC near the connectors will illuminate (See Figure 3-10). A solid "on" indication should be present when the system is functioning properly. This unit is not field serviceable. Please consult with Landolt Corporation if replacement is required.

WGU

The WGU is the receiver unit for the wire guidance system (See Figure 3-10). It receives signal data from the antennas and communicates to the VMC. The WGU is used as a slave unit in the system. The unit is not field serviceable. Please consult with Landolt Corporation if replacement is required.
