The Mathematics of Marriage John M. Gottman, James D. Murray, Catherine C. Swanson, Rebecca Tyson, Kristin R. Swanson, 2005-01-14 Divorce rates are at an all time high But without a theoretical understanding of the processes related to marital stability and dissolution it is difficult to design and evaluate new marriage interventions The Mathematics of Marriage provides the foundation for a scientific theory of marital relations The book does not rely on metaphors but develops and applies a mathematical model using difference equations The work is the fulfillment of the goal to build a mathematical framework for the general system theory of families first suggested by Ludwig Von Bertalanffy in the 1960s The book also presents a complete introduction to the mathematics involved in theory building and testing and details the development of experiments and models In one marriage experiment for example the authors explored the effects of lowering or raising a couple's heart rates Armed with their mathematical model they were able to do real experiments to determine which processes were affected by their interventions Applying ideas such as phase space null clines influence functions inertia and uninfluenced and influenced stable steady states attractors the authors show how other researchers can use the methods to weigh their own data with positive and negative weights While the focus is on modeling marriage the techniques can be applied to other types of psychological phenomena as well

Analyzing Social and Political Change Angela Dale, Richard B Davies, 1994-07-05 Understanding change over time is a central concern for research in sociology political science education geography and related disciplines It is also an issue which presents significant methodological problems in response to which different techniques have been developed for example time series analysis multilevel models log linear models and event history analysis Outlining the nature of such techniques this accessible collection covers the respective values of cross sectional and longitudinal data in the analysis of change the variety of methods available for the analysis of change over time the types of research objective to which various techniques are suited the limitations and constraints of individual methods and the different philosophies which underlie particular approaches

Couple Observational Coding Systems Patricia K. Kerig, Donald H. Baucom, 2004-07-22 A companion volume

to Family Observational Coding Systems this book moves from the triad to the dyad and provides a showcase for significant developments in the coding of intimate couple interactions The hope is that this book will contribute to the broadening and deepening of the field by disseminating information both about the coding systems that have been developed as well as the conceptual and methodological issues involved in couple observational research The first three chapters present overviews of conceptual and methodological issues in the study of couple processes The remaining chapters describe contributions to the field by 16 teams of researchers Each chapter provides information about the conceptual underpinnings and structure of the coding system developed by the authors and evidence for its psychometric properties Couple Observational Coding Systems will be of interest to researchers studying couple interactions as well as clinicians who work with couples

Control Systems Design Vladimir Zakian, 2005-08-24 In recent decades a comprehensive new framework for the theory and design of control systems has emerged It treats a range of significant and ubiquitous design problems more effectively than the conventional framework Control Systems Design brings together contributions from the originators of the new framework in which they explain expand and revise their research work It is divided into four parts basic principles including those of matching and inequalities with adjustments for robust matching and matching based on H infinity methods and linear matrix inequalities computational methods including matching conditions for transient inputs and design of a sampled data control system search methods including search with simulated annealing genetic algorithms and evaluation of the node array method case studies including applications in distillation benchmarking critical control of magnetic levitation systems and the use of the principle of matching in cruise control

Artificial Intelligence in Real-Time Control 1992 M.G. Rodd, H.B. Verbruggen, 2014-06-28 The symposium had two main aims to investigate the state of the art in the application of artificial intelligence techniques in real time control and to bring together control system specialists artificial intelligence specialists and end users Many professional engineers working in industry feel that the gap between theory and practice in applying control and systems theory is widening despite efforts to develop control algorithms Papers presented at the meeting ranged from the theoretical aspects to the practical applications of artificial intelligence in real time control Themes were the methodology of artificial intelligence techniques in control engineering the application of artificial intelligence techniques in different areas of control and hardware and software requirements This symposium showed that there exist alternative possibilities for control based on artificial intelligence techniques
