

# Prokaryotic Cells

Prokaryotes are microscopic single-celled organisms. Prokaryotic cells don't have a distinct nucleus with a membrane. **Correctly label the following prokaryotic cell structures.**

|               |                 |           |           |         |
|---------------|-----------------|-----------|-----------|---------|
| Cell Membrane | Cell Wall       | Capsule   | Pili      | Plasmid |
| Flagella      | Nucleoid Region | Ribosomes | Cytoplasm |         |

**Briefly explain the function of each labeled structure.**

|                 |                                                                           |
|-----------------|---------------------------------------------------------------------------|
| Cell Membrane   | selectively permeable, controls movement of substances in and out of cell |
| Cell Wall       | made of cellulose, supports the cell                                      |
| Capsule         | helps prokaryotes cling to each other and to other surfaces               |
| Pili            | appendages that allow a bacterium to stick to a surface                   |
| Plasmid         | small rings of DNA                                                        |
| Flagella        | propels the cell                                                          |
| Nucleoid Region | contains the genes that control the cell                                  |
| Ribosomes       | site of protein synthesis                                                 |
