green logistics in practice **Green Logistics** Prof Alan McKinnon, Dr Sharon Cullinane, Dr Anthony Whiteing, Professor Michael Browne, 2010-03-03 The main objective of logistics is to coordinate the movement of products through the supply chain in a way that meets customer requirements at minimum cost. In the past, this cost has been defined in purely monetary terms. As concern for the environment rises, companies must take more account of the external costs of logistics associated mainly with climate change, air pollution, noise, vibration, and accidents. Green Logistics analyses the environmental consequences of logistics and how to deal with them. Written by a leading team of logistics academics, the book examines ways of reducing these externalities and achieving a more sustainable balance between economic, environmental, and social objectives. **Electronics World**, 2008 **Polymers in Electronics 2007**, 2007 This conference saw presentations from all parts of the electronics industry's materials supply chain, from raw materials to finished products, and offered an opportunity to learn more about both traditional and new polymer materials, their markets, manufacturing processes, and applications. It also covered the impact of legislation, the need to recycle, and other polymer-related challenges and opportunities for the industry. **Corporate Culture and Environmental Practice** Jennifer A. Howard-Grenville, 2007 Jennifer Howard-Grenville has put together a timely and sparkling narrative of environmental advocacy within a highly successful, well-managed, and technically sophisticated organization. Corporate Culture and Environmental Practice is rich in ethnographic detail and wonderfully telling of the struggles structurally marginalized environmental specialists take part in when trying to balance immediate cost, schedule, and production targets with long-term social and environmental risks. A blend of Mary Douglas, Karl Weick, and Charles Perrow, this is a must-read for students of organizations as well as the rest of us who worry about the fate of the planet. John Van Maanen, Massachusetts Institute of Technology, US Jennifer Howard-Grenville has hit the nail on the head: technology is not the cause of our environmental problems; culture is. In Corporate Culture and Environmental Practice, she deftly shows us that the norms and practices that guide the way we think about our relationship with the natural environment are the critical point at which to understand the development of the technologies that facilitate that interface. Written from first-hand experiences, this book is a thoughtful and revealing glimpse into the culture of a company that only an accomplished organizational scholar can provide. Andrew J. Hoffman, University of Michigan, US Corporate Culture and Environmental Practice is an outstanding study that looks inside a firm to understand conditions under which it adopted superior environmental practices. It makes a persuasive case for not modeling firms as unitary actors. This careful and well-written study will be useful to both environmental policy scholars and practitioners. Aseem Prakash, University of Washington, US This book breaks new ground in understanding the generally difficult process of selling peripheral, in this case environmental or sustainability initiatives, to the mainstream culture of a firm. To those who seek to be change agents, it offers powerful ideas toward success for such intentions. But this book is not only for those on the outside of the mainstream; it offers lessons for anyone seeking change, even at the top. John R. Ehrenfeld, former Director, MIT Technology

Business and Environment Program US Although much has been written about how corporations deal with environmental problems few books delve into the inner workings of a company seeking to deal with environmental demands as deeply as Corporate Culture and Environmental Practice Through first hand observation Howard Grenville provides unique insights into the cultural factors that shape environmental management decisions in a major semiconductor manufacturing firm By analyzing those decisions through a framework that relates internal and external factors she provides a new cultural perspective on corporate environmental practices that should be of strong interest to both business leaders and students of corporate environmental management Dennis A Rondinelli University of North Carolina Chapel Hill and Duke University US Culture patterns of meaning and associated actions speaks volumes about what matters and what doesn t Jennifer Howard Grenville s study describes how corporate culture enables organizational change in some instances or blocks it in others As the need for corporate response to increasingly vital environmental issues looms more important we need change models to help companies adapt to new realities This study is vital 0reading for scholars and practitioners who care about the future Jim Post Boston University US I found the writing style very engaging The author writes clearly and with little jargon She makes the technology come alive and gives a feel for elements that might be very complex in the hands of another writer Alfred Marcus University of Minnesota US This innovative book explores from an insider s perspective a company s environmental decisions and actions Based on clo **Greener Products** Al Iannuzzi,2016-04-19 As the global demand for natural and organic products continues to grow making and marketing greener products is becoming an imperative The old stereotype of green products sub par performance has been shattered as large multinational corporations prove that you can develop and win in the marketplace with a naturals based product platform And the pull for sustainably minded products is not limited to consumer marketing business to business marketing of greener products has also increased due to customer demand from all business sectors The Case for Greener Products Making a compelling business case for why companies must provide greener more sustainable products Greener Products The Making and Marketing of Sustainable Brands shares best practices for the design and marketing of greener products The book examines ecosystem and regulatory pressures as well as market pressures from customers consumers business customers and government purchasers who have created a demand on manufacturers to bring more sustainable brands to market How Are Greener Products Made Through case studies of green design from companies such as GE Ecomagination™ Timberland Green Index Philips Apple Inc Seventh Generation Procter Gamble BASF and others the author explores initiatives in areas ranging from product design sustainable sourcing and packaging to energy efficiency recycling and end of life management A contribution from guest author James A Fava one of the leading thinkers and practitioners in developing greener products presents a toolbox of environmental management systems programs and tools for the development of greener products Three Keys to Successful Green Marketing Campaigns Providing the backbone for the author s analysis of green marketing a contribution from guest authors Lee Ann Head Karen
