Turner, 2022-12-27 Atoms Radiation and Radiation Protection Discover the keys to radiation protection in the fourth edition of this best selling textbook A variety of atomic and sub atomic processes including alpha beta and gamma decay or electron ejection from inner atom shells can produce ionizing radiation This radiation can in turn produce environmental and biological effects both harmful including DNA damage and other impacts of so called radiation sickness and helpful including radiation treatment for cancerous tumors Understanding the processes that generate radiation and the steps which can be taken to mitigate or direct its effects is therefore critical in a wide range of industries and medical subfields For decades Atoms Radiation and Radiation Protection has served as the classic reference work on the subject of ionizing radiation and its safeguards Beginning with a presentation of fundamental atomic structure and the physical mechanisms which produce radiation the book also includes thorough discussion of how radiation can be detected and measured as well as guide lines for interpreting radiation statistics and detailed analysis of protective measures both individual and environmental Now updated by a new generation of leading scholars and researchers Atoms Radiation and Radiation Protection will continue to serve global scientific and industrial research communities Readers of the fourth edition of Atoms Radiation and Radiation Protection will also find Detailed updates of existing material including the latest recommendations of the ICRP and NCRP Treatment of current physiokinetic and dosimetric models All statistics now presented in SI units making the book more globally accessible Atoms Radiation and Radiation Protection is a foundational guide for graduate students and researchers in health physics and nuclear physics as well as related industries

The New Element Berkelium (atomic Number 97) Stanley Gerald Thompson, Albert Ghiorso, Glenn Theodore Seaborg, 1950 An isotope of the element with atomic number 97 has been discovered as a product of the helium ion bombardment of americium This isotope decays with the emission of alpha particles of maximum energy 6 72 Mev 30 percent and it emits lower energy alpha particles of energies 6 55 Mev 53 percent and 6 20 Mev 17 percent The half life of this isotope is 4 6 hours and it decays primarily by electron capture with about 0 1 percent branching decay by alpha particle emission The mass number is probably 243 as indicated by chemical separation of the alpha particle and electron capture daughters The name berkelium symbol Bk is proposed for element 97 The chemical separation of element 97 from the target material and other reaction products was made by combinations of precipitation and ion exchange adsorption methods making use of its anticipated III and IV oxidation states and its position as a member of the actinide transition series The distinctive chemical properties made use of in its separation and the equally distinctive decay properties of the particular isotope constitute the principal evidence for the new element
