synthesis is the evaluation or analysis of research evidence and opinion on a specific topic to aid in decision making in health care. Although the science of evidence synthesis has developed most rapidly in relation to the meta analysis of numerical data linked to theories of cause and effect, the further development of theoretical understandings and propositions of the nature of evidence, its role in health care delivery and the facilitation of improved global health have increased rapidly since 2000. The articles appearing in this issue examine the role of evidence synthesis in nursing and health care and are written by expert translational scientists from across the world. Three introductory articles overview evidence synthesis and its role in evidence based health care, methods, issues and trends in the systematic review of health care evidence and the development of a robust evidence base for nursing. Subsequent articles explore the impact of systematic reviews on policy and practice in a variety of settings including perioperative care, pediatrics, rehabilitation and long term continuing care, mental health and public health. The final articles discuss the impact of evidence on health policy and practice and the complexities of translating evidence into policy and practice. These articles show the importance of synthesizing evidence and translating policy and practice into action in our quest to improve health care and health outcomes.

Creative Teaching Strategies for the Nurse Educator Judith W Herrman, 2019-10-22 Be more creative in any setting Here are nearly 200 practical relevant and easy to implement teaching strategies that will help engage your students in any classroom setting Dr Judith Herrman offers techniques gathered over many years from her own teaching experiences that are adaptable to personal teaching content meet the needs of a variety of learning styles and demonstrate innovation in nursing education **Geriatric Medicine** Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults

represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine
