Evans,Toshimitsu Ochiai,2016-06-01 This book focuses on group sequential methods for clinical trials with co primary endpoints based on the decision making frameworks for 1 rejecting the null hypothesis stopping for efficacy 2 rejecting the alternative hypothesis stopping for futility and 3 rejecting the null or alternative hypothesis stopping for either futility or efficacy where the trial is designed to evaluate whether the intervention is superior to the control on all endpoints For assessing futility there are two fundamental approaches i e the decision to stop for futility based on the conditional probability of rejecting the null hypothesis and the other based on stopping boundaries using group sequential methods In this book the latter approach is discussed The book also briefly deals with the group sequential methods for clinical trials designed to evaluate whether the intervention is superior to the control on at least one endpoint In addition the book describes sample size recalculation and the resulting effect on power and type I error rate The book also describes group sequential strategies for three arm clinical trials to demonstrate the non inferiority of experimental intervention to actively control and to assess the assay sensitivity to placebo control **Antitrust in Data Driven Markets & Legal Framework for Influencers, Native Advertising and Control over the Use of AI in Marketing** Bruce Kilpatrick,Pierre Kobel,Pranvera Këllezi,2022-12-07 This book gathers contributions from a broad range of jurisdictions written by practitioners and academics alike and offers an unparalleled comparative view of key issues in competition law intellectual property and unfair competition law with a specific focus on the use of personal data The first part focuses on the role of competition law in shaping the digital economy It discusses the use of personal data the market power of platforms the assessment of free services and more broadly the responsibility of dominant companies in the smooth functioning of the digital economy In turn the second part sheds light on how the conduct of influencers native advertising and the use of AI for marketing purposes can be controlled by the law focusing on the use of personal data and the impact of behavioral advertising on consumers In this regard the book brings together the current legal responses across a number of European and other countries all summarized and elaborated on in the form of two international reports The LIDC is a long standing international association that focuses on the interface between competition law and intellectual property law including unfair competition issues **The Regulation of Post-Communist Party Politics** Fernando Casal Bértoa,Ingrid van Biezen,2017-11-06 The question of how political parties are and ought to be regulated has assumed an increased importance in recent years both within the scholarly community and among policy makers and politicians as the state assumes an increasingly active role in the management of and control over their behaviour and organisation This book concentrates on the regulation of political parties in the EU post communist democracies and on Bulgaria Croatia the Czech Republic Estonia Hungary Latvia Lithuania Poland Slovakia Slovenia and Romania in particular In analysing the various dimensions of party regulation it builds on the main premises derived from the neo institutionalist literature in political science concerning the

ways in which the formal and informal rules and procedures may influence constrain or determine the behaviour of political actors In doing so it provides a comprehensive overview of the regulation of Eastern European political parties provided by leading experts in the field and casts theoretical and empirical light on the manner in which the constitutional and legal regulation of party organizations and finances have had an impact or not on the consolidation of party politics in post communist Europe since 1989 This text will be of key interest to scholars and students of Political Parties and Behaviour East European and Post Communist Politics and Comparative Politics **Sports Law in Italy** Michele Colucci, Giuseppe

Candela, Salvatore Civalè, Alessandro Coni, 2018-05-15 Derived from the renowned multi volume International Encyclopaedia of Laws this practical analysis of sports law in Italy deals with the regulation of sports activity by both public authorities and private sports organizations The growing internationalization of sports inevitably increases the weight of global regulation yet each country maintains its own distinct regime of sports law and its own national and local sports organizations Sports law at a national or organizational level thus gains a growing relevance in comparative law The book describes and discusses both state created rules and autonomous self regulation regarding the variety of economic social commercial cultural and political aspects of sports activities Self regulation manifests itself in the form of by laws and encompasses organizational provisions disciplinary rules and rules of play However the trend towards more professionalism in sports and the growing economic social and cultural relevance of sports have prompted an increasing reliance on legal rules adopted by public authorities This form of regulation appears in a variety of legal areas including criminal law labour law commercial law tax law competition law and tort law and may vary following a particular type or sector of sport It is in this dual and overlapping context that such much publicized aspects as doping sponsoring and media and responsibility for injuries are legally measured This monograph fills a gap in the legal literature by giving academics practitioners sports organizations and policy makers access to sports law at this specific level Lawyers representing parties with interests in Italy will welcome this very useful guide and academics and researchers will appreciate its value in the study of comparative sports law Negative

of Chemoattractant Research we will portray some of the key discoveries that helped to transform cell migration research

into a global playing field within immunology and beyond Early progress had a profound effect on both academia and industry Today numerous academic laboratories are fully engaged in compiling a detailed road map describing the highly complex network of immune and tissue cells that respond to chemoattractants Industrial research on the other hand centers on drugs that interfere with immune cell traffic in inflammatory diseases and cancer The following series of short stories provide personal accounts on key discoveries The individual molecular discoveries enabled numerous research laboratories worldwide to unravel their significance in steady state or pathological immune processes Although ground breaking in their own right it is therefore worth emphasizing that rapid progress in chemoattractant research was made possible by many other laboratories who were not directly involved in the original discovery process Therefore the authors of this mini series are discussing their findings in the context of time place and subsequent progress enabled by their discoveries It is hoped that a wide readership will find these accounts entertaining as well as educational although those who wish to gain a more detailed knowledge are referred to the many outstanding reviews on chemokines and other chemoattractants

Emerging Market Economies and Financial Globalization Leonardo E. Stanley, 2018-03-15 In the past foreign shocks arrived to national economies mainly through trade channels and transmissions of such shocks took time to come into effect However after capital globalization shocks spread to markets almost immediately Despite the increasing macroeconomic dangers that the situation generated at emerging markets in the South nobody at the North was ready to acknowledge the pro cyclicity of the financial system and the inner weakness of decontrolled financial innovations because they were enjoying from the great moderation Monetary policy was primarily centered on price stability objectives without considering the mounting credit and asset price booms being generated by market liquidity and the problems generated by this glut Mainstream economists in turn were not majorly attracted in integrating financial factors in their models External pressures on emerging market economies EMEs were not eliminated after 2008 but even increased as international capital flows augmented in relevance thereafter Initially economic authorities accurately responded to the challenge but unconventional monetary policies in the US began to create important spillovers in EMEs Furthermore in contrast to a previous surge in liquidity funds were now transmitted to EMEs throughout the bond market The perspective of an increase in US interest rates by the FED is generating a reversal of expectations and a sudden flight to quality Emerging countries currencies began to experience higher volatility levels and depreciation movements against a newly strong US dollar are also increasingly observed Consequently there are increasing doubts that the unexpected favorable outcome observed in most EMEs at the aftermath of the Global Financial Crisis GFC would remain
