algebraic topology the third part of the text advances to persistent homology This point of view is critically important in turning a mostly theoretical field of mathematics into one that is relevant to a multitude of disciplines in the sciences and engineering The main approach is the discovery of topology through algorithms The book is ideal for teaching a graduate or advanced undergraduate course in computational topology as it develops all the background of both the mathematical and algorithmic aspects of the subject from first principles Thus the text could serve equally well in a course taught in a mathematics department or computer science department Applied Mechanics Reviews, 1987 *Geocells* T.
