Advanced edge detection, such as the new curvature and moment slip atomic attributes in the Peierls platform, provides a clear delineation of complex structures, such as complex faulting of in situ and growth areas. Through interactive geometrical/atomic reconstruction, hierarchy and topological relationships can be investigated. The modelling-attribute-interpreting capabilities help deliver a consistent validated structural framework of the subsurface that can be used directly to fracture mapping, and well and geophysical workflows.

Multiscale attribute analysis and volume-based visualization is the fastest way to interrogate and analyze your data when determining subtle morphologic features. The Pivotal platform improves productivity and visualization using the latest GPU technology. Advanced volume attributes, such as Generalized Spectral Decomposition, are generated on the fly and blended using the MIPMap tool in real 32-bit color. Parameters are fine-tuned using interactive and dynamic controls for instant updates. Geological bodies are isolated and extracted from the seismic, and can be directly compiled into the model and used directly in seismic distribution.
