

EXPLOSIVES

Schlumberger Field Safety Procedures

Conventional Electrical Initiators (Detonators and Igniters)

1. During pre-job planning consult a local weather forecast for potential for lightning storm.
2. On arrival hold consultation with client, if possible.
3. Check well area for hazards and correct when necessary.
4. Hold spot safety meeting.
5. No smoking except in designated areas. Store smoking materials when leaving these areas.
6. Rig up cable. Remove rig wiring that might contact cable. Top drive systems should be electrically isolated in accordance with the manufacturer's procedures.
7. Outside preparations before attaching an explosive device:
 - a. Turn off electrical cathodic protection systems.
 - b. Discontinue all electric welding operations.
 - c. On water operations, install the positive grounding cable from truck to barge or wireline unit to generator skid.
 - d. Check voltage between the rig, casing and cable armor using a multimeter. Attempt to eliminate it at its source, if present.
 - e. Test and install Casing-to-Rig Voltage Monitor.
 - f. **DO NOT PROCEED WITH OPERATIONS IF RESIDUAL VOLTAGE IS IN EXCESS OF 0.25V BETWEEN RIG, CASING, AND CABLE ARMOR.**
 - g. Install safety grounding straps between the unit, rig and casing.
 - h. Put out sign reading "Danger Explosives - Turn Off Radio Transmitters" or equivalent.
 - i. Turn off all radio frequency (RF) transmitters (radio, cellular, radar, RF wireless networks, driving monitors, etc.) and auto-transmitting receivers within 30 ft (9 m) of an explosive device being armed or an armed explosive device.
 - j. All transmitters (such as radio or TV stations) greater than 200 watts and within 1 mile (1.6 km) of the well must be disabled such that they cannot transmit.
8. **APPLYING POWER AT SURFACE ONCE THE EXPLOSIVE OPERATION HAS STARTED IS PERMITTED ONLY ON THE CONDITION THAT THE CABLE HEAD AND ENTIRE TOOLSTRING ARE IN CLEAR VIEW OF THE ENGINEER WHILE APPLYING TOOL POWER.** Power must not be applied through a gun or explosive tool assembly at any time while on the surface, **ARMED OR UNARMED.** Explosive operations have started when explosives are no longer secured as required for shipment and/or storage.
9. Instrument cable preparations for explosive operations:
 - a. Ensure continuity of logging cable to the safety switch (CSS). Do not disconnect collector plug.
 - b. Turn off all AC powered instrumentation, main circuit breakers, inverters, UPSs, AC power generators, and rig power connections. For units that use an isolated power distribution utility (eg. follow the official power down procedures posted on the power distribution panel).
 - c. Turn off safety switch (CSS) and remove key. The key **MUST** remain outside the wireline unit until the explosive device is introduced into the well to a minimum depth of 200 ft (70 m) below ground level or the sea floor.
10. Procedure for attaching any explosive device (such as CPST, CST, perforating guns, etc.) to the cable:
 - a. If lightning can be seen, thunder can be heard, or weather is deteriorating rapidly (wind gusts, temperature variations, sudden precipitation, fast building clouds, etc.), attaching the head to the gun string, arming, disarming, and/or handling of any explosive device must not be initiated.
 - b. Attaching the head to the gun string, performing arming procedures and/or handling of any explosive device must not be commenced until both no thunder can be heard for 30 continuous minutes and the weather has stabilized for 30 continuous minutes.
 - c. Arming, disarming, and/or handling any explosive device must not be commenced if a helicopter or a boat is expected to arrive before the arming operation can be completed and the gun introduced into the well to a minimum depth of 200 ft (70 m) below ground level or the sea floor.
 - d. Verify that the Casing-to-Rig Voltage Monitor reads less than 0.25V.
 - e. Clear the line of fire of all personnel.
 - f. Attach the explosive device to the head. The individual performing this operation **MUST** have the safety switch key in their possession at all time. The key **MUST** remain outside the wireline unit until the explosive device is introduced into the well to a minimum depth of 200 ft (70 m) below ground level or the sea floor. For CST operations, point the bullet side of the CST gun into the cable skid before attaching the head to the gun string.
11. Arming perforating guns (Only the engineer or technician in charge of job may arm a gun.):
 - a. The cable must be attached to the gun string before the gun string is armed. However, guns that will not be electrically connected to the cable when the head is attached may be armed immediately prior to their use and then attached to the cable.
 - b. Confirm that the line of fire is still clear.
 - c. Check the gun wires for sparking.
 - d. Trim the gun wires.
12. Proceed into the well.
13. Safety procedures while in the hole:
 - a. At a minimum depth of 200 ft (70 m) below ground level or the sea floor, turn on the safety switch, restore AC power, etc. Essential RF transmitters may be turned on. Continue into the hole.
 - b. Tie in, position the gun and shoot.
 - c. Coming out of hole, at a minimum depth of 200 ft (70 m) below ground level or the sea floor, reestablish RF silence and prepare the instrument cable for explosive operations (9 a. through c.). Verify that the Casing-to-Rig voltage is less than 0.25V. **CAUTION** - if a lightning storm, helicopter or boat will arrive before the disarming operation can be completed, the gun must be kept in the well at a minimum depth of 200 ft (70 m) below ground level or the sea floor. Refer to 10 a) to c) for lightning storm observations.
14. If follow carrier gun(s) did not fire, perform the test to determine if an ongoing thermal event (a hang fire) is occurring. If there is, follow the recovery procedures. Otherwise, immediately relieve any trapped pressure and then disarm the gun(s) (ballistically before electrically using the procedure provided in the Field Operations Manual). Once disarmed, the gun may be disconnected from the cable. If the gun contains HMX explosives that were heated to more than 330°F, disarm it but do not download the explosives from the gun for 48 hr.
15. All guns must be safely relieved of any trapped pressure immediately upon removal from well according to the instructions in the Field Operations Manual.
16. Check the area for detonating cord remnants, chargers, etc., and pack them in the explosive remnants box. Pack misfired detonators in the detonator carrying case after shorting their leads. All remnants must be returned to the magazine for storage and then properly disposed of.

Schlumberger approved High Voltage RF Safe Initiation Equipment

For operations utilizing Schlumberger approved High Voltage RF Safe Initiation Equipment in place of conventional electrical detonators, the following exceptions apply to the procedures above:

- Radio transmitters can be left powered and used without restrictions.
- Casing-to-Rig voltages can exceed 0.25V, but **MUST NOT** exceed 40.0V.
- Electrical cathodic protection systems can be left powered.
- Helicopter and boat operations can be continued.
- Electrical welding operations can be continued except in areas where explosives are stored or are being used.

All OTHER procedures including weather precautions must be followed.

An approved exemption with a detailed HARC is required per SLB-QHSE-S010 (MOC and Exemption) - WL Appendix if any of these procedures cannot be followed.

Refer to the FOM and IT 2623926 FAQ for details and clarification. REVISION 10-AUG-2010
