Dressler, 2013-11-11 The NATO Advanced Study Institute New Vistas in Electro Nuclear Physics was held in Banff Alberta Canada from August 22 to September 4 1985 This volume contains the lecture notes from that Institute The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan's Linear Accelerator Laboratory This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines In particular that physics which requires high energy and or high duty cycle accelerators for its extraction was intended to be the focus of the Institute Thus the scope of the lectures was wide with topics ranging from the structure of the trinucleons to quark models of nucleons QCD and QHD The theme however was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest **Aspirin and the Salicylates** K. Ginsberg,2019-11-19 The great Beat poet's observations, reflections, poetry and mind-expanding explorations while traveling through South America. When Allen Ginsberg went to South America in 1960 ostensibly to attend a literary conference, he had a different kind of trip in mind. This would be another experience in the Beat poet's journey deep into the realm of consciousness, the inward travel explored to exhilarating effect in his writing, whether in the poetry that had already earned him international acclaim or in the idiosyncratic journals that raised self-documentation to a new form of art. In his *South American Journals*, covering a tumultuous six months, Ginsberg describes his travels through Chile and Peru, his visit to Machu Picchu and his search for a source for ayahuasca or yag, a mind-expanding drug recommended by his friend William S. Burroughs, another writer well-traveled in altered states of consciousness. Far from quotidian diary entries, Ginsberg's observations in these pages interspersed with poetry, dream notations and musings about spirituality amount to a critical chapter in the poet's informal autobiography. Writing more during these six months than in any of his other journals, Ginsberg summons great ferment. In his distinctive accounts of all that he encounters, elevating travel writing to lyrical expression in an abundance of poems published here for the first time in both first drafts and polished forms in his reports of fascinating conversations and in particular in detailed passages that delve into inner recesses of his consciousness, Ginsberg recreates a journey like no other one that reflects the workings of one of the best minds of his generation in the world of his own making and in its mysterious immutable counterpart in the South American landscape.

Dappe, Guido Ori, 2020-02-14 This book provides a unique and comprehensive overview of the latest advances, challenges and accomplishments in the rapidly growing field of theoretical and computational materials science. Today an increasing number of industrial communities rely more and more on advanced atomic-scale methods to obtain reliable predictions of materials properties, complement qualitative experimental analyses and circumvent experimental difficulties. The book examines some of the latest and most advanced simulation techniques currently available as well as up-to-date theoretical approaches adopted by a selected panel of twelve international research teams. It covers a wide range of novel and advanced materials, exploring their structural, elastic, optical, mass and electronic transport properties. The cutting-edge techniques presented appeal to physicists, applied mathematicians and engineers interested in advanced simulation methods in materials science. The book can also be used as additional literature for undergraduate and postgraduate students with majors in physics, chemistry, applied mathematics and engineering.
