Science Research Soleman H. Abu-Bader, 2011-07-01 In *Using Statistical Methods* Soleman Abu Bader detects and addresses the gaps between the research and data analysis of the classroom environment and the practitioner's office. This book not only guides social scientists through different tests but also provides students and researchers alike with information that will help them in their own practice. With focus on the purpose, rationale, and assumptions made by each statistical test and a plethora of research examples that clearly display their applicability and function in real world practice, Professor Abu Bader creates a step by step description of the process needed to clearly organize, choose a test or statistical technique, analyze, interpret, and report research findings.

Building the Future: Innovation, Sustainability, and Collaboration in Construction Ramabodu Molusiwa Stephan, Clinton Aigbavboa, Samuel Herald Chikafalimani, 2025-09-26 This conference proceedings present cutting edge research that is shaping the future of the construction industry. It has a strong emphasis on sustainability, digital transformation, and emerging technologies. It contains contributions from experts in academia, industry, and policy who engage in critical discussions on how artificial intelligence, digitalisation, and innovation can drive efficiency, enhance project outcomes, and modernise the sector. The proceedings address key challenges including skills shortages, infrastructure limitations, and adoption barriers to help foster industry wide transformation. The CIDB conference attracted researchers, industry professionals, policymakers, and stakeholders from across the construction sector, and its proceedings offer valuable insights into emerging trends and best practices. The conference proceedings are designed for those seeking to explore the intersection of technology, sustainability, and construction management in an evolving global landscape.

Conceptual metaphor and embodied cognition in science learning Tamer Amin, Fredrik Jeppsson, Jesper Haglund, 2018-10-03 Scientific concepts are abstract human constructions invented to make sense of complex natural phenomena. Scientists use specialised languages, diagrams, and mathematical representations of various kinds to convey these abstract constructions. This book uses the perspectives of embodied cognition and conceptual metaphor to explore how learners make sense of these concepts. That is, it is assumed that human cognition, including scientific cognition, is grounded in the body and in the material and social contexts in which it is embedded. Understanding abstract concepts is therefore grounded via metaphor in knowledge derived from sensory and motor experiences arising from interaction with the physical world. The volume consists of nine chapters that examine a number of intertwined themes: how systematic metaphorical mappings are implicit in scientific language, diagrams, mathematical representations, and the gestures used by scientists; how scientific modelling relies fundamentally on metaphor and can be seen as a form of narrative cognition; how implicit metaphors can be the sources of learner misconceptions; how conceptual change and the acquisition of scientific expertise involve learning to coordinate the use of multiple implicit metaphors; and how effective instruction can build on recognising the embodied nature of scientific cognition and the role of metaphor in scientific thought and learning. The volume also includes three extended commentaries from leading researchers in the fields of cognitive linguistics, the

learning sciences and science education in which they reflect on theoretical methodological and pedagogical issues raised in the book This book was originally published as a special issue of the International Journal of Science Education
