Explain how the hormone insulin controls blood glucose concentration			 <p>The diagram illustrates the homeostatic control of blood glucose concentration. It begins with a plate of food (a burger and fries) at the top left. An arrow points from the food to the small intestine, where a label states: "Glucose is absorbed from the small intestine after digestion of food." From the small intestine, an arrow labeled "glucose" points to the right, leading to a label: "Blood glucose concentration rises." This rise triggers a response from the pancreas, shown as a yellowish organ on the right, with a label: "Pancreas responds to high blood glucose by releasing insulin." An arrow labeled "insulin" points from the pancreas to the left, leading to a label: "Blood glucose concentration falls to normal." The diagram uses a circular flow to represent the continuous nature of this process, with a pinkish-red background representing the bloodstream.</p>
