Guideline for Building Services Design Inspired by the Cradle to Cradle Concept Johannes Stiglmaier, Karsten Jurkait, 2020 The Cradle to Cradle C2C concept is a biomimetic approach that models human industry on nature s processes viewing materials as nutrients circulating in healthy and safe metabolisms It seeks to create systems that are not only efficient but also essentially waste free A growing number of building owners and developers are looking to implement it in their buildings be it to increase the productivity of their workforce or to provide a differentiator The C2C concept is reasonably covered in building construction however it is a rather uncharted area in building services making it difficult for MEP engineers to develop C2C inspired designs Arup set out to bridge this gap establishing how C2C inspired design would look like in the different MEP disciplines

and researching which systems products and materials are available in the market to meet the corresponding criteria The result is a comprehensive guideline that enables MEP engineers to develop a C2C inspired design It covers design criteria system selection system sizing design for deconstruction as well as material and product selection for the main MEP disciplines and sets out a number of criteria by which the aptness of a design for C2C can be measured *5th International Munich Chassis Symposium 2014* Peter E. Pfeffer,2014-07-18 The key drivers of innovation in the field of chassis systems are measures to improve vehicle dynamics and driving safety efforts to reduce fuel consumption and intelligent development methods In addition chassis development is focusing on enhancing ride comfort while also improving NVH characteristics At the same time modularization strategies concepts for the electrification of the powertrain and steps towards greater system connectivity are making increasingly complex demands on the chassis and its development Developers are being called upon to respond to these challenges with a variety of solutions
