V. Binoy,2017-02-17 This first of a kind volume provides a snapshot of existing science communication policy and practice in India across different S T sectors

and offers solutions to building effective communication. It provides an understanding on how to avoid societal clashes in situations when science meets the public in these sectors. The editors and contributors argue that effective S T communication leads not only to a more informed public but also benefits research itself and in a changing society like India this is a crucial element related to good governance and policy making. In this volume experienced masters of the craft provide practical solutions to making S T communication more effective in a vast democracy like India which has complex issues related to literacy levels, diverse languages, varying political will, reach, and resources. Through discussions on cases of creating information modules for the public on the Internet, television, and radio, social media, as well as traditional ways of outreach like people's science movements, holding popular science events and fairs, the volume provides highly valuable directions on how developing countries with low resources and complex populations can communicate S T research to the public and bridge communication gaps. This volume will interest researchers from science, social science, mass communication, and public relations departments, journalists, as well as practitioners and policy makers from government and non-government institutions involved in S T policy practice and communication, and people who want to understand the complex S T landscape of India.

The cultural authority of science is the authority that is granted to science in any particular context. This authority is as much a matter of image and perceived legitimacy as of statutory guarantee. However, while authority can be charismatic, based on tradition, or based on competence, we would assume that science aims to be an authority of competence. To what extent does science have the last word or stand above opinion on public issues? This Indo-European led collaboration aims to map the cultural authority of science and to construct a system of indicators to observe this science culture based on artefacts, science news analysis, and espoused beliefs and evaluations, public attitude data. Indeed, through a series of studies, the authors examine the cultural authority of science in light of the challenges posed by European, Asian, African, and American developments and debates. In particular, two main ideas are examined: the Lighthouse model, whereby science is shining into a stormy sea of ignorance and mistrust, and the Bungee Jump model, which demonstrates how science occasionally experiences a rough ride against a backdrop of goodwill. Presenting expertise in discourse analysis, computer-assisted text analysis, and largescale survey analysis, *The Cultural Authority of Science* will be of interest to a global audience concerned with the standing of science in society. In particular, it may appeal to scholars and students of fields such as sociology of science, science communication, science studies, scientometrics, innovation studies, and social psychology. *Inquiry into the Singapore Science Classroom*

Aik-Ling Tan, Chew-Leng Poon, Shirley S.L. Lim, 2014-05-19 This book offers an insight into the research and practices of science teaching and learning in the Singapore classroom with particular attention paid to how they map on to science as inquiry. It provides a spectrum of Singapore's science educational practices through all levels of its education system, detailing both successes and shortcomings. The book features a collection of research and discourse by science educators in Singapore organized around four themes that are essential components of approaching science as inquiry: teachers' ideas and their practices, opportunities and constraints from a systemic level, students' competencies and readiness to learn through inquiry, and the need for greater awareness of the role of informal learning avenues in science education. In addition, the discourse within each theme is enriched by commentary from a leading international academic which helps to consolidate ideas as well as position the issues within a wider theoretical and international context. Overall, the papers set out important contexts for readers to understand the current state of science education in Singapore. They also highlight strengths and gaps in practices of science as inquiry as well as provide suggestions about how the system can be improved. These research findings are therefore helpful as they provide honest and evidence-based feedback as well as tangible and doable ideas that policy makers, teachers, students, and school administrators can adopt, adapt, and enhance. Embargoed Science Vincent Kiernan, 2023-12-11 The popular notion of a lone scientist privately toiling long hours in a laboratory striking upon a great discovery and announcing it to the world is a romanticized fiction Vincent Kiernan's *Embargoed Science* reveals the true process behind science news an elite few scholarly journals control press coverage through a mechanism known as an embargo The journals distribute advance copies of their articles to hundreds and sometimes thousands of journalists around the world on the condition that journalists agree not to report their stories until a common time several days later When the embargo lifts airwaves and newspaper pages are flooded with stories based on the journal's latest issue In addition to divulging the realities behind this collusive practice Kiernan offers an unprecedented exploration of the embargo's impact on public and academic knowledge of science and medical issues He surveys twenty five daily U S newspapers and relates his in depth interviews with reporters to examine the inner workings of the embargo and how it structures our understanding of news about science Kiernan ultimately argues that this system fosters pack journalism and creates an unhealthy shield against journalistic competition The result is the uncritical reporting of science and medical news according to the dictates of a few key sources
