JIMD Reports, Volume 32 Eva Morava, Matthias Baumgartner, Marc Patterson, Shamima Rahman, Johannes Zschocke, Verena Peters, 2017-02-28 JIMD Reports publishes case and short research reports in the area of inherited metabolic disorders Case reports highlight some unusual or previously unrecorded feature relevant to the disorder or serve as an important reminder of clinical or biochemical features of a Mendelian disorder *Progress of Allo- and Xeno-Transplantation Facilitating the Initial Xeno-Kidney and Islet Clinical Trials* Burcin Ekser, Lisha Mou, Hanchao Gao, 2022-10-11 *Biomarkers of Oxidative Stress* Bo Akerstrom, Magnus Gram, 2020-06-15 **Adaptation Biology and Medicine** Y Kawai, 2017-01-05 Although the entire evolution of life is an adaptation right from the coming together of the elements and reaching to human life as we know today the realization of the adaptation biology as a discipline is relatively recent Furthermore subcellular basis of gradual adaptation of body systems in stressful conditions is still a great mystery of biology The present book attempts to fill that gap It is known that such an adaptation not only increases tolerance of the body to that given stress but also to other challenges A complete knowledge of this cross protection needs to be defined and exploited to improve patient care The book includes chapters describing subcellular adaptations adaptation to different stresses as well as to lifestyle and environment Although for an easy reading the information has been grouped under the sub heading Current Trends the book represents a common continuum of adaptations The therapeutic value of the understanding of the science of adaptation has also been described in several chapters Examples of cross adaptations are also provided where repeated exposure to one stimulus may potentially be used in the treatment as well as prophylaxis of different diseases The present book will be of great interest to all biologists physiologists pharmacologists and physicians interested in the application of the biology of adaptation in the improvement of health Insomnia and beyond - Exploring the therapeutic potential of orexin receptor antagonists Michel Alexander Steiner, Christopher J Winrow, 2014-11-11 Orexin hypocretin neuropeptides produced by a few thousand neurons in the lateral hypothalamus are of critical importance for the control of vigilance and arousal of vertebrates from fish to amphibians birds and mammals Two orexin peptides called orexin A and orexin B exist in mammals They bind with different affinities to two distinct widely distributed excitatory G protein coupled receptors orexin receptor type 1 and type 2 OX1 and OX2 The discovery of an OX1 mutation causing canine narcolepsy the narcolepsy like phenotype of orexin peptide knockout mice and the orexin neuron loss associated with human narcoleptic patients laid the foundation for the discovery of small molecule OX1 antagonists as novel treatments for sleep disorders Proof of concept studies from Glaxo Smith Kline Actelion Pharmaceuticals Ltd and Merck have now consistently demonstrated the efficacy of dual OX1 antagonists DORAs in promoting sleep in rodents dogs non human primates and humans Some of these antagonists have completed late stage clinical testing in primary insomnia Orexin drug discovery programs have also been initiated by other large pharmaceutical companies including Hoffmann La Roche Novartis Eli Lilly and Johnson Johnson

Orexins are increasingly recognized for orchestrating the activity of the organism's arousal system with appetite reward and stress processing pathways. Therefore, in addition to models of insomnia, pharmacological effects of DORAs have begun to be investigated in rodent models of addiction, depression, and anxiety. The first clinical trials in diabetic neuropathy, migraine, and depression have been initiated with Merck's MK 6096 (www.clinicaltrials.gov). Whereas the pharmacology of DORAs is established for their effects on wakefulness, pharmacological effects of selective OX₁ or OX₂ antagonists, SORAs, have remained less clear. From an evolutionary point of view, the OX₂ was expressed first in most vertebrate lineages, whereas the OX₁ is believed to result from a gene duplication event when mammals emerged. Yet both receptors do not have redundant function. Their brain expression pattern, their intracellular signaling, as well as their affinity for orexin A and orexin B, differs. During the past decade, most preclinical research on selective OX₁ antagonism was performed with SB 334867. Only in recent years, other selective OX₁ and OX₂ antagonists with optimized selectivity profiles and pharmacokinetic properties have been discovered, and phenotypes of OX₁ and OX₂ knockout mice were described. The present Research Topic, referred to in the Editorial as special topics issue, comprises submissions of original research manuscripts as well as reviews directed towards the neuropharmacology of OX₁ antagonists. The submissions are preclinical papers dealing with dual and/or selective OX₁ antagonists that shed light on the differential contribution of endogenous orexin signaling through both OXRs for cellular physiological and behavioral processes. Some manuscripts also report on convergence or divergence of DORA vs SORA effects with phenotypes expressed by OX₁ or OX₂ knockout animals. Ultimately, these findings may help further define the potential of DORAs and SORAs in particular therapeutic areas in insomnia and beyond insomnia.

Microbial Decontamination by Novel Technologies - Mechanisms and Application Concepts Alexander Mathys, Kai Reineke, Henry Jäger, 2019-09-26 *Drug Development for Parasite-induced Diarrheal Diseases* Anjan Debnath, James H. McKerrow, 2017-08-25

One of the top four contributors to the global burden of disease is diarrheal infections. Intestinal parasites are major causes of morbidity and mortality associated with diarrheal diseases in both the developed and developing world. Amebiasis is responsible for 50 million cases of invasive disease and 70 000 deaths annually in the world. Giardiasis has an estimated worldwide prevalence of 280 million cases annually. In developed countries, *Giardia lamblia* infects about 2% of adults and 6-8% of children. The prevalence of *G. lamblia* infection is generally higher in developing countries, ranging from 3% to 90%. Furthermore, giardial infections contribute substantially to the 2.5 million annual deaths from diarrheal disease. In Asia, Africa, and Latin America, about 500 000 new giardiasis cases are reported each year. *Cryptosporidium* accounts for 20% and 9% of diarrheal episodes in children in developing and developed countries, respectively. Infection with *Cryptosporidium* can be chronic and especially debilitating in immunosuppressed individuals and malnourished children. A recent study to measure disease burden based on disability-adjusted life years (DALYs) found that cryptosporidiosis and amebiasis produce about 10.6 million DALYs. This exceeds the DALYs of any helminth infection.

currently being targeted by the World Health Organization for preventive chemotherapy. Because of its link with poverty, *Giardia* and *Cryptosporidium* were included in the WHO Neglected Diseases Initiative in 2004. *E. histolytica*, *G. lamblia*, and *C. parvum* have been listed by the National Institutes of Health (NIH) as category B priority biodefense pathogens due to low infectious dose and potential for dissemination through compromised food and water supplies in the United States. Despite the prevalence of amebiasis, giardiasis, and cryptosporidiosis, there are no vaccines or prophylactic drugs. The first-line drugs for invasive amebiasis and giardiasis chemotherapy are nitroimidazoles, with the prototype metronidazole being the most common drug used worldwide. Metronidazole has been shown to be both mutagenic in a microbiological system and carcinogenic to rodents and frequently causes gastrointestinal side effects. In spite of the efficacy of nitroimidazole drugs, treatment failures in giardiasis occur in up to 20% of cases. Clinical resistance of *G. lamblia* to metronidazole is proven, and cross-resistance is a concern with all commonly used anti-giardial drugs. Nitazoxanide, the only FDA-approved drug for the treatment of cryptosporidiosis, is effective in the treatment of immunocompetent patients and partially effective for immunosuppressed patients. Therefore, it is critical to search for more effective drugs to treat amebiasis, giardiasis, and cryptosporidiosis. This Research Topic for *Frontiers in Microbiology* will explore the recent progress in drug development for parasitic diarrheal diseases. This includes an understanding of drug resistance mechanisms. We would also welcome submissions on the drug development for other diarrheal parasites. We hope that this research topic will include a comprehensive survey of various attempts by the parasitology research community to create effective drugs for these diseases.

Environmental Chemistry Harold H. Trimm, III, William Hunter, 2011-12-15 This title includes a number of Open Access chapters. Environmental chemistry is an interdisciplinary field of study that involves the science of ecology as well as chemistry. Environmental chemistry covers the basic chemistry and biochemistry that occur naturally in the world around us. It focuses on the air, water, and land. Environmental science **The Human Microbiota in Periodontitis** Julien Santi-Rocca, Marcia Pinto Alves Mayer, Marcela Hernández, 2022-06-02 **The Role of Myeloid-Derived Cells in the Progression of Liver Disease** Hannelie Korf, Reiner Wiest, Rajiv Jalan, Schalk Van Der Merwe, 2020-01-22 **Cytobiology of Human Prostate Cancer Cells and Its Clinical Applications** Kenichiro Ishii, 2020-06-25 The number of males diagnosed with prostate cancer (PCa) is increasing all over the world. Most patients with early stage PCa can be treated with

appropriate therapy such as radical prostatectomy or irradiation. On the other hand, androgen deprivation therapy (ADT) is the standard systemic therapy given to patients with advanced PCa. ADT induces temporary remission, but the majority of patients (approximately 60%) eventually progress to castration-resistant prostate cancer (CRPC), which is associated with a high mortality rate. Generally, well-differentiated PCa cells are androgen-dependent, i.e., androgen receptor (AR) signalling regulates cell cycle and differentiation. The loss of AR signalling after ADT triggers androgen-independent outgrowth, generating poorly differentiated, uncontrollable PCa cells. Once PCa cells lose their sensitivity to ADT, effective therapies are limited. In the last few years, however, several new options for the treatment of CRPC have been approved, e.g., the CYP17 inhibitor, the AR antagonist, and the taxane. Despite this progress in the development of new drugs, there is a high medical need for optimizing the sequence and combination of approved drugs. Thus, the identification of predictive biomarkers may help in the context of personalized medicine to guide treatment decisions, improve clinical outcomes, and prevent unnecessary side effects. In this Special Issue Book, we focused on the cytobiology of human PCa cells and its clinical applications to develop a major step towards personalized medicine matched to the individual needs of patients with early-stage and advanced PCa and CRPC. We hope that this Special Issue Book attracts the attention of readers with expertise and interest in the cytobiology of PCa cells.

EVEs are integral parts of the genomes of eukaryotic organisms and are involved in various physiological and pathological processes. The focus of this eBook is on the involvement of EVEs in cancer and autoimmune diseases. *Frontiers in Microbiology* 3 February 2019. EVEs, Autoimmunity and Cancer. In particular, research on endogenous retroviruses and endogenous bornaviruses is included. The presented data demonstrate that EVEs are fascinating objects that are still worth exploring. *Environmental Health Perspectives*, 2008
