Learning in Depth Kieran Egan, 2011-01-15 For generations schools have aimed to introduce students to a broad range of topics through curriculum that ensure that they will at least have some acquaintance with most areas of human knowledge by the time they graduate Yet such broad knowledge can't help but be somewhat superficial and as Kieran Egan argues it omits a crucial aspect of true education deep knowledge Real education Egan explains consists of both general knowledge and detailed understanding and in Learning in Depth he outlines an ambitious yet practical plan to incorporate deep knowledge into basic education Under Egan's program students will follow the usual curriculum but with one crucial addition beginning with their first days of school and continuing until graduation they will each also study one topic such as apples birds sacred buildings mollusks circuses or stars in depth Over the years with the help and guidance of their supervising teacher students will expand their understanding of their one topic and build portfolios of knowledge that grow and change along with them By the time they graduate each student will know as much about his or her topic as almost anyone on earth and in the process will have learned important even life changing lessons about the meaning of expertise the value of dedication and the delight of knowing something in depth Though Egan's program may be radical in its effects it is strikingly simple to implement as a number of schools have already discovered and with Learning in Depth as a blueprint parents educators and administrators can instantly begin taking the first steps toward transforming our schools and fundamentally deepening their students' minds

Learning to Teach English and the Language Arts Peter Smagorinsky, 2020-04-16 Drawing together Smagorinsky's extensive research over a 20 year period Learning to Teach English and the Language Arts explores how beginning teachers' pedagogical concepts are shaped by a variety of influences Challenging popular thinking about the binary roles of teacher education programs and school based experiences in the process of learning to teach Smagorinsky illustrates through case studies in the disciplines of English and the Language Arts that teacher education programs and classroom school contexts are not discrete contexts for

learning about teaching nor are each of these contexts unified in the messages they offer about teaching He explores the tensions not only between these contexts and others but within them to illustrate the social cultural contextual political and historical complexity of learning to teach Smagorinsky revisits familiar theoretical understandings including Vygotsky's concept development and Lortie's apprenticeship of observation to consider their implications for teachers today and to examine what teacher candidates learn during their teacher education experiences and how that learning shapes their development as teachers
