Implementing Colorectal Cancer Screening Institute of Medicine,National Cancer Policy Forum,2008-12-01 The IOM s National Cancer Policy Board estimated in 2003 that even modest efforts to implement known tactics for cancer prevention and early detection could result in up to a 29 percent drop in cancer deaths in about 20 years The IOM s National Cancer Policy Forum which succeeded the Board after it was disbanded in 2005 continued the Board s work to outline ways to increase screening in the U S On February 25 and 26 2008 the Forum convened a workshop to discuss screening for colorectal cancer Colorectal cancer screening remains low despite strong evidence that screening prevents deaths With the aim to make recommended colorectal cancer screening more widespread the workshop discussed steps to be taken at the clinic community and health system levels Workshop speakers representing a broad spectrum of leaders in the field identified major barriers to increased screening and described strategies to overcome these obstacles This workshop summary highlights the information presented as well as the subsequent discussion about actions needed to increase colorectal screening and ultimately to prevent more colorectal cancer deaths

From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems Samuel Abiven,Cristina Santín,2019-05-09 Fire derived organic matter also known as pyrogenic carbon PyC is ubiquitous on Earth It can be found in soils sediments water and air In this wide range of environments fire derived organic matter represents a key component of the organic matter pool and in many cases the largest identifiable group of organic compounds PyC is also one of the most persistent organic matter fractions in the ecosystems and its study is therefore particularly relevant for the global carbon cycle From its production during vegetation fires to its transfer into soils sediments and waters PyC goes through different transformations both abiotic and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more

Vocational Identity and Career Construction in Education Fidan, Tuncer,2018-12-14 Over the years careers have transformed to be flexible and changing rather than stable life long commitments to an organization As such making work meaningful controlling the work environment and taking the opportunity to get required training for the next job are as important as the financial advantages Educators careers cannot be isolated from the rest of the labor market and these developments are expected to influence the career decisions of educators Vocational Identity and Career Construction in Education uses career construction theory to investigate objective factors influencing career choices and paths of educators including factors influencing vocational personality development career counseling activities transition from school to work adaptation to different work environments and meaning of work for educators Featuring research on topics such as diagnosing career barriers person environment fit and workforce adaptability this book is designed for educational administrators human resources theorists students studying career related subjects and practitioners working in managerial positions in private and public educational organizations

Tomorrow's High School Gene Bottoms,2022-04-11 How do some high schools produce graduates that consistently achieve at high levels Would you believe there s a set of proven

strategies that could help you deliver similar impressive results and better prepare students for the world after high school. High schools in the United States face a startling reality: many graduates are unprepared for success in postsecondary studies or for high demand, well-paying jobs in a rapidly changing economy. Although this situation is alarming, the high schools that have embraced new ways of learning show us what is possible. Drawing from his experience with the High Schools That Work initiative, Gene Bottoms offers educators a path forward by urging them to pursue bold goals and outlining bold actions for achieving those goals. His vision is clear: replace the traditional model of secondary education with one that engages students in a rigorous curriculum that combines a solid academic core with intellectually demanding career pathway courses. The notion that nearly all students can achieve at high levels is borne out by numerous examples of high schools, including those with traditionally underperforming student populations that have used key strategies to help all students realize their potential. Bottoms explains the root causes of the current shortcomings in high school education and then specifies critical components of successful transformation: Shared leadership, Powerful assignments (especially in math literacy and career technical education) planned and executed by academic and career pathway teachers working together, Strengthened connections between middle school and high school, A redesigned senior year, and Comprehensive counseling and advisory programs. Provocative and persuasive in its sense of urgency, *Tomorrow's High School* offers proven and practical solutions to finally make high schools a rich and rewarding experience for all students, whatever their future college and career goals may be. This book is a copublication of ASCD and SREB. It includes access to nine downloadable appendixes.

Brennan, 2024-07-30 Can American health insurance survive? In *The Transformation of American Health Insurance*, Troyen A. Brennan traces the historical evolution of public and private health insurance in the United States from the first Blue Cross plans in the late 1930s to reforms under the Biden administration. In analyzing this evolution, he finds long-term trends that form the basis for his central argument: that employer-sponsored insurance is becoming unsustainably expensive and Medicare for All will emerge as the sole source of health insurance over the next two decades. After thirty years of leadership in health care and academia, Brennan argues that Medicare for All could act as a single payer program or become a government-regulated program of competing health plans like today's Medicare Advantage. The choice between these two options will depend on how private insurers adapt and behave in today's changing health policy environment. This critical evolution in the system of financing health care is important to employers, health insurance executives, government officials, and health care providers who are grappling with difficult strategic choices. It is equally important to all Americans as they face an inscrutable health insurance system and wonder what the future might

hold for them regarding affordable coverage

Rural Road Engineering in Developing Countries Jasper Cook,Robert Christopher Petts,2023-08-02 Rural Road Engineering in Developing Countries provides a comprehensive coverage of the planning design construction and maintenance of rural roads in developing countries and emerging nations It covers a wide range of technical and non technical problems that may confront road engineers working in the developing world focusing on rural roads which provide important links from villages and farms to markets and offer the public access to health education and other services essential for sustainable development Most textbooks on road engineering are based on experience in industrialised countries with temperate climates or deal only with specific issues with many aspects of the design and construction of roads in developing regions stemming from inappropriate research undertaken in Europe and the USA These approaches are frequently unsuitable and unsustainable for rural road network environments particularly in low to middle income countries This book takes on board a more recent research and application focus on rural roads integrating it for a broad range of readers to access current information on good practice for sustainable road engineering in developing countries The book particularly suits transportation engineers development professionals and graduate students in civil engineering Billboard ,2008-07-12 In its 114th year Billboard remains the world s premier weekly music publication and a diverse digital events brand content and data licensing platform Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music video gaming media digital and mobile entertainment issues and trends
