Million Dollar Data: Building Confidence - Vol.1 Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is

not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic

Multicultural Curriculum Transformation in Science, Technology, Engineering, and Mathematics Christine Clark, Amanda VandeHei-Carter, Kenneth J. Fasching-Varner, Zaid M. Haddad, 2018-07-27 This volume focuses on multicultural curriculum transformation in Science Technology Engineering and Mathematics or STEM subject areas broadly while also focusing on sub content areas e g earth science digital technologies in greater detail The discussion of each sub content area outlines critical considerations for multicultural curriculum transformation for the sub content areas by grade level early childhood and elementary school education middle and or junior high school education and high school education and then by organizing tool parameters standards both in a generalized fashion and specific to Common Core State Standards among other standards educational context relationships with and among students and their families civic engagement considerations pertaining to educational ability broadly considered for example for gifted and talented education bilingual gifted and talented education regular education bilingual regular education special education bilingual special education as well as relative to specific content and corresponding pedagogical considerations including evaluation of student learning and teaching effectiveness In this way the volume provides a conceptual framework and concrete examples for how to go about multiculturally transforming curriculum in STEM curricula The volume is designed to speak with PK 12 teachers as colleagues in the multicultural curriculum transformation work at focus in each subject area and at varied grade levels Readers are exposed to things to think about but also given curricular examples to work with or from in going about the actual concrete work of curriculum change It bridges the gaps between preparing PK 12 teachers to be able to 1 independently multiculturally adapt existing curriculum and 2 create new multicultural curriculum differentiated for their content areas and grade levels while also 3 providing ample examples of what such adapted and new differentiated curricula looks like In so doing this volume also bridges the gaps between the theory and practice of multicultural curriculum transformation in higher and PK 12 educational contexts
