

Solving MATH Problems in SCIENCE

1. Underline the given information
(What information does the problem tell you?)
2. Circle or highlight the unknowns
(What are we solving for?)
3. Write the Formula
4. Write the Givens
5. Plug and Chug
(Fill the givens into the formula and solve)
6. Box your answer, include units.

Example:

Calculate the density of an object with a mass of 35g and a volume of 7ml.

1. Mass and volume are given.
2. Density is unknown
3. Density = mass/volume
4. Mass = 35g, Volume = 7mL
5. Density = $m/v = 35g/7mL = 5 \text{ g/mL}$

Answer: 5 g/mL

The Compressed Word Problem for Groups Markus Lohrey, 2014-04-04 The Compressed Word Problem for Groups provides a detailed exposition of known results on the compressed word problem emphasizing efficient algorithms for the compressed word problem in various groups The author presents the necessary background along with the most recent results on the compressed word problem to create a cohesive self contained book accessible to computer scientists as well as mathematicians Readers will quickly reach the frontier of current research which makes the book especially appealing for students looking for a currently active research topic at the intersection of group theory and computer science The word problem introduced in 1910 by Max Dehn is one of the most important decision problems in group theory For many groups highly efficient algorithms for the word problem exist In recent years a new technique based on data compression for providing more efficient algorithms for word problems has been developed by representing long words over group generators in a compressed form using a straight line program Algorithmic techniques used for manipulating compressed words has shown that the compressed word problem can be solved in polynomial time for a large
