The 1/2 Lot Project: A 5,000 Sq Ft Life Dale Stubbart, This

book details the design for a smaller living space You can adjust the plans to meet your desires and needs If this book says to do something one way and you want to do it another way investigate how to do it another way and then do it that way

Hopefully this idea will encourage your own ideas And hopefully it will more than halve the carbon footprint of a typical home in the US 5 000 square feet may sound like a lot of space until you realize we re talking about land area and that 10 000 sq ft is the typical size of a city residential lot 10 000 sq ft is a little less than 1 4 acre So 5 000 sq ft would be half that much or about 1 10 acre Since we re reducing the land area by 1 2 we should also reduce the house and the car by 1 2 The Not So Big House reduced houses to about 2000 sq ft In this project we will go even further reducing the house to 500 sq ft Many starter homes modulars trailer homes and two bedroom apts are 1000 sq ft Large RV s and Houseboats are about 1000 sq ft or less 500 sq ft is the size of a small 1 bedroom apt or a large studio apt We could make the house 1000 sq ft by giving it a basement or a second floor but we want to reduce the amount of house we have to heat cool clean and maintain Some of things I ve designed to maximize the space in your home and garage have yet to be invented If they are never invented there is still plenty of room in both the house and the garage The inventions just give you that much more space One of these inventions is the car The car is a modular car meaning it comes in pieces or modules which can be easily taken apart and put back together The main module or cab of the car holds 2 people and a few groceries Most of the time the only module you need is the main module The other two modules are a back seat and an enclosed truck bed or van module You can even attach all three modules together and still have a car that is small enough to fit easily in a 1 car garage *Lithium-Ion Cells*

Yury Koshtyal ,Alexander Rumyantsev,2024-12-24 A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid state cells as well as others Considering the popularity of the discussed topics one can hope to find detailed information on the Internet Indeed modern search engines make it possible to locate a sufficiently large number of relevant documents However while conducting such research we encountered the following challenges the data are somewhat fragmented and their systematization and structuring are required search results do not always meet search

queries For instance data that were relevant to the topic were found but they did not match the query as accumulated data grow the search time for new information extends the choice of search engine and location different countries affects search results the data are not indexed in search engines although the correct keywords and website were requested the information disappears due to website updates and the found data require additional processing For example many presentations show changes in the shape of the discharge curves depending on the discharge current strength In addition however Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required Thus this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications

Motor Vehicles, the Environment, and the Human Condition Hans A. Baer,2019-10-09 The world now has more than a billion motor vehicles and this number continues to increase as developing countries imitate developed societies in their adoption of the culture of automobility This book explores the political ecology of motor vehicles in an era of growing social disparities and environmental crises the latter of which are most manifest in anthropogenic climate change to which motor vehicles constitute a major contributor A political ecological perspective recognizes that motor vehicles perhaps more than any other machine embody the social structural cultural and environmental contradictions of the capitalist world system In addition to highlighting many of the environmental social and health environmental consequences of humanity s increasing reliance on motor vehicles particularly private automobiles this book argues that ultimately we need as a species to move beyond motor vehicles as much as possible but that such an effort will have be part and parcel of creating an alternative world system based on social justice democratic processes environmental sustainability and a safe climate one termed democratic eco socialism
