

A Greek scholar Eratosthenes was the first to coin the term Geography derived from the two Greek words i.e. 'Geo' means earth and 'graphy' means description. Geography is thus a description of earth's surface and the entire phenomenon appearing on it.

What is Geography?

- A science that deals with the description, distribution and interaction of the diverse physical, biological and cultural features of the earth's surface.
- Geography is the study of Earth's physical features and environment including the impact of human activity on these factors and vice versa. The subject also encompasses the study of patterns of human population distribution, land use, resource availability and industries.

Scholars who study geography are known as geographers. These people engage themselves in the exciting task of exploring and studying the Earth's natural environment and human society.

and Empire Gerry Kearns, 2009-06-11 Geopolitics and Empire examines the relations between two phenomena that are central to modern conceptions of international relations Geopolitics is the understanding of the inter relations between empires states individuals private companies NGOs and multilateral agencies as these are expressed and shaped spatially This view of the world achieved notoriety as the scientific basis claimed by Nazi ideologists of global conquest However under this or another name similar sets of ideas were important on both sides of the Cold War and now have a renewed resonance in debates over the New World Order of the so called Global War on Terror Geopolitics is a way of describing the conflicts between states as constrained by both physical and economic space It makes such conflicts seem inevitable The argument of the book is that this view of the world continues to appear salient because it serves to make the projection of force overseas seem an inevitable aspect of the foreign policy of states This quasi Darwinian view of international relations makes the pursuit of Empire appear a responsibility of larger and more powerful states Powerful states must become Empires or submit to others seeking something similar In its associations with Empire the study of Geopolitics returns continually to the ideas of a British geographer who never himself used the term Halford Mackinder is the source of many of the ideas of Geopolitics and by examining his ideas both in their original context and as they have been repeatedly rediscovered and reinvented this book contributes to current discussions of the ideology and practices of the US Empire today
