Handbook of Personality Assessment Irving B. Weiner, Roger L. Greene, 2011-01-31 This comprehensive balanced guide to personality assessment written by two of the foremost experts in the field is sure to become the gold standard of texts on this topic The Handbook of Personality Assessment covers everything from the basics including a historic overview and detailed discussion of the assessment process and its psychometric foundations to valuable sections on conducting the assessment interview and the nature interpretation and applications of the most popular self report objective and performance based projective measures A concluding section of special topics such as computerized assessment ethical and legal issues and report writing are unique to this text Understanding Psychological Assessment William I. Dorfman, Michel Hersen, 2013-11-11 Introductory texts on psychological testing and evaluation historically are not in short supply Typically however such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests More practical clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test Understanding Psychological Assessment is an attempt to address these concerns It brings together into a single volume a broad sampling of the most respected instruments in the psychologist's armamentarium along with promising new tests of cognitive vocational and personality functioning Additionally it presents the most updated versions of these tests all in a practical clearly written format that covers the development psychometrics administrative considerations and interpretive hypotheses for each instrument Clinical case studies allow the reader to apply the interpretive guidelines to real clinical data thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test Understanding Psychological Assessment includes cognitive and personality tests for adults children and adolescents as well as chapters on the theory of psychological measurement and integrated report writing Comprehensive Handbook of Psychological Assessment, Volume 2 Mark J. Understanding Psychological Testing in Children Stewart Gabel, G.D. Oster, S.M. Butnik, 2013-06-29 There is a considerable amount of interest within pediatrics and primary health care that is currently being directed toward the behavioral and emotional problems of childhood Traditionally these areas have been emphasized by child psychiatrists child psychologists and psychiatric social workers Now however the detection and in some cases the assessment and treatment of children with these types of disturbances fall within the province of primary child health care professionals Even when the child psychiatrist or child psychologist provides the primary mental health treatment for the child specialists such as pediatricians family physicians pediatric nurses pediatric nurse practitioners and speech therapists remain instrumental in support of the ongoing psychotherapeutic process as providers of some other aspect of total health care to the child and family For these pediatricians family physicians and other nonpsychologist primary health care providers it is essential to acquire an understanding and effective working knowledge of important psychological information and concepts to utilize within their own framework and professional responsibilities In order that this may be accomplished these professionals with limited backgrounds in psychology must better understand

how psychologists themselves assess children and how they derive the conclusions reflected in the statements and reports that are shared with members of their own and other disciplines In short nonpsychologists must become substantially more familiar with psychological assessment particularly with psychological testing and the subsequent reporting of results
