Erikson associates with childhood humor play dreams and hope and shows how these resources assist children in confronting life's difficulties and challenges Capps further suggests that the resourceful self that develops in childhood is central to Jesus' own vision of what we as adults may become if we follow the lead of little children Pageants and Plays Depicting the Life of George Washington and His Time United States George Washington Bicentennial Commission, 1932 **The Forms of Renaissance Thought** L. equilibrium is an intractable problem And if centralized specially designed algorithms cannot find Nash equilibria why should we expect distributed selfish agents to converge to one The remaining hope was that at least approximate Nash equilibria can be efficiently computed Understanding whether there is an efficient algorithm for approximate Nash equilibrium has been the central open problem in this field for the past decade In this book we provide strong evidence that even finding an approximate Nash equilibrium is intractable We prove several intractability theorems for different settings two player games and many player games and models computational complexity query complexity and communication complexity In particular our main result is that under a plausible and natural complexity assumption Exponential Time Hypothesis for PPAD there is no polynomial time algorithm for finding an approximate Nash equilibrium in two player games The problem of approximate Nash equilibrium in a two player game poses a unique technical challenge it is a member of the class PPAD which captures the complexity of several fundamental total problems i e problems that always have a solution and it also admits a quasipolynomial time algorithm Either property alone is believed to place this problem far below NP hard problems in the complexity hierarchy having both simultaneously places it just above P at what can be called the frontier of intractability Indeed the tools we develop in this book to advance on this frontier are useful for proving hardness of approximation of several other important problems whose complexity lies between P and NP Brouwer's fixed point market equilibrium CourseMatch A CEEI densest k subgraph community detection VC dimension and Littlestone dimension and signaling in zero sum games

The Alchemist Ben Jonson, 1997 From virtue to venality examines the problem of corruption in British urban society and politics between 1930 and 1995 It is not a conventional study of the politics of local government since it seeks to place corruption in urban societies in a wider cultural context The accounts of corruption in Glasgow a British Chicago as well as the major corruption scandals of John Poulson and T Dan Smith show how Labour controlled towns and cities were especially vulnerable to corrupt dealings By contrast the case of Dame Shirley Porter in the City of Westminster in the late 1980s reveals that Conservative controlled councils were also vulnerable since in London the stakes of the political struggle were especially intense This book will be of special interest to students of history and politics and those who are concerned about the growth of corruption in British political culture
