It works with other leading open source agile and lightweight Java technologies like Hibernate, Groovy, MyBatis and more. Spring now also works with Java EE and JPA 2 as well. Pro Spring 3 updates the bestselling Pro Spring with the latest that the Spring Framework has to offer: version 3.1. At 1000 pages, this is by far the most comprehensive Spring book available, thoroughly exploring the power of Spring. With Pro Spring 3, you'll learn Spring basics and core topics and gain access to the authors' insights and real world experiences with remoting, Hibernate and EJB. Beyond the basics, you'll learn how to leverage the Spring Framework to build various tiers or parts of an enterprise Java application like transactions, the web and presentations tiers, deployment and much more. Workload-sensitive Timing Behavior Analysis for Fault Localization in Software Systems Matthias Rohr,2015-02-09 Software timing behavior measurements such as response times often show high statistical variance This variance can make the analysis difficult or even threaten the applicability of statistical techniques This thesis introduces a method for improving the analysis of software response time measurements that show high variance Our approach can find relations between timing behavior variance and

both trace shape information and workload intensity information This relation is used to provide timing behavior measurements with virtually less variance This can make timing behavior analysis more robust e g improved confidence and precision and faster e g less simulation runs and shorter monitoring period The thesis contributes TracSTA Trace Context Sensitive Timing Behavior Analysis and WiSTA Workload Intensity Sensitive Timing Behavior Analysis TracSTA uses trace shape information i e the shape of the control flow corresponding to a software operation execution and WiSTA uses workload intensity metrics e g the number of concurrent software executions to create context specific timing behavior profiles Both the applicability and effectiveness are evaluated in several case studies and field studies The evaluation shows a strong relation between timing behavior and the metrics considered by TracSTA and WiSTA Additionally a fault localization approach for enterprise software systems is presented as application scenario It uses the timing behavior data provided by TracSTA and WiSTA for anomaly detection
