Emerging Technologies for Viability Enumeration of Live Microorganisms Jean L. Schoeni, Christina Vegge, Hanan R. Shehata, Elna Buys, Marco Pane, Binu Koshy, 2025-01-30. Please note that Systems Microbiology does not consider descriptive studies that are solely based on amplicon e.g. 16S rRNA profiles unless they are accompanied by a clear hypothesis and experimentation and provide insight into the microbiological system or process being studied. Some strains of live microorganisms confer health benefits, probiotics, or therapeutic properties. LBP live biotherapeutic products when present or administered at adequate levels. Until now, the gold standard for measuring potency of live microbial products has been colony forming units (CFU) enumeration. However, gaps between current analysis methodology and the need for reliable strain level viability enumeration have been reported. To ensure the presence of adequate levels of viable beneficial microorganisms, industries, researchers, and regulatory agencies look to emerging technologies for solutions to test and document product quality, maintain consumer confidence, and enhance understanding of live microorganism systems.
