Introduction

Students get to solve various problems in class, which range from Mathematics to social issues. These problems help students to develop and apply problem solving techniques, which are essential in promoting their critical analysis of their environment along with its complexities.

Problem solving abilities are therefore very important in developing intellectuals for enrichment of the society. It transforms student learning techniques into participative rather than passive recipients when it comes to creation of understanding.

Students develop capacity to Apply problem solving skills whenever faced with unexpected occurrences or situations in a timely manner. Real world problems are usually different from class problems, this call on students to recollect and transform their problem solving skills into solution for real world problems.

This paper will explore two real world problems and provide persuasive as well as scientific thinking solutions to them (Harris, 2002, p. 1).

Problem solving techniques are those skills used to solve life problems. They refer to an individual's ability to reason both inductively and deductively, as well as be able to apply logic which can help that individual to infer problems, analyze and think critically.

These problems may require solutions arising from different elements such as persuasive thinking as well as scientific thinking, among others. Most problem solving processes involve the following stages; problem identification, analysis, generation of potential solutions, testing of solutions and evaluating the outcome.

In order to ensure that these methods are well applied, one needs to critically analyze the problem encountered. The following is an illustration of problems and their solutions (Harris, 2002, p. 1).
