

O.G.T. SCIENCE TEST: *QUICK STUDY GUIDE*

PLATE TECTONICS

The Earth's outer layer is broken up into 7 **lithospheric plates**. This is sometimes referred to as the **CRUST**.

The plates move due to **convection currents** inside the **ASTHENOSPHERE** or **MANTLE**.

When the plates move, many things can happen including **volcano eruptions, earthquakes, mountain building, seafloor spreading, etc.**

ATOMS

protons = positive charge, found inside the nucleus

electrons = negative charge, found in the "electron cloud" (surround the nucleus)

neutrons = neutral charge, found inside the nucleus

THE PERIODIC TABLE

The **atomic number** is equal to the **number of protons**. The *number of protons is equal to the number of electrons* in a neutral atom.

The **atomic mass** is equal to the **number of protons plus the number of neutrons**.

The **group number** (found at the top of each column) is equal to the **number of valence electrons**. *This is used when drawing electron dot structures.*

POTENTIAL ENERGY VS. KINETIC ENERGY

potential energy – an object's stored energy

Objects that are higher up or have more mass have a higher potential energy.

kinetic energy – an object's energy while in motion

DENSITY

density = mass/volume

Objects or substances that are **MORE** dense **SINK**.

Objects or substances that are **LESS** dense **RISE**.

NEWTON'S LAWS OF MOTION & GRAVITY

Newton's 1st Law: an object in motion stays in motion and an object at rest stays at rest

Newton's 2nd Law: $F = ma$

Newton's 3rd Law: for every action there is an equal and opposite reaction

Gravity: Under ideal conditions, objects fall to the ground at the same rate.

FOOD WEBS & ENERGY PYRAMIDS

FOOD WEBS show the **feeding relationships** between **plants and animals in an ecosystem**. *Arrows* show the relationships. They show the direction of energy transfer.

ENERGY PYRAMIDS show the **relative amounts of energy at each trophic level**. The amount of energy is greatest at the bottom of the pyramid and lowest at the top of the pyramid.

PYRAMID OF NUMBERS shows the **relative number of individuals at each trophic level**.

trophic level – each step in a food web or pyramid

SCIENTIFIC INQUIRY

Observations are made by gathering information about events or processes. An **inference** is a **logical interpretation** based on prior knowledge or experience.

A **hypothesis** is a **proposed scientific explanation** for a set of observations.

The variable that is **deliberately changed** is called the **manipulated variable**. The variable that is observed and changes in response to the manipulated variable is called the **responding variable**. *A control group is not exposed to the independent variable so that it can be used as comparison to the experimental data.*

Inherited Metabolic Disease in Adults Carla E. M. Hollak,Robin Lachmann,2016-07-19 As clinical management of inherited metabolic diseases IMDs has improved more patients affected by these conditions are surviving into adulthood This trend coupled with the widespread recognition that IMDs can present differently and for the first time during adulthood makes the need for a working knowledge of these diseases more important than ever Inherited Metabolic Disease in Adults offers an authoritative clinical guide to the adult manifestations of these challenging and myriad conditions These include both the classic pediatric onset conditions and a number of new diseases that can manifest at any age It is the first book to give a clear and concise overview of how this group of conditions affects adult patients a that topic will become a growing imperative for physicians across primary and specialized care

Genetics and Epigenetics of Psychiatric Diseases, 2nd Edition Cunyou Zhao,Weihua Yue,Zhexing Wen,2020-10-09 Psychiatric diseases have a highly complex etiology aggregating in families but not segregating in a traditional Mendelian manner Recent approaches to understanding the causes of psychiatric disease have focused on

describing the genetic contribution to major psychiatric illnesses the use of large scale genome wide association studies GWAS and exome sequencing has enabled a systematic exploration of genetic risk factors and identified over 100 independent genomic loci significantly associated with psychiatric diseases however there remains uncertainty about the causal genes involved in disease pathogenesis and how their function is regulated Since many GWAS variants reside in non coding regions the disease associated common variants might be enriched in regulatory domains including enhancers and regions of active chromatin state These lead us to focus on the possible role of non sequence based genomic variation in health and disease Of particular interest are epigenetic modifications that regulate gene expression through modifications to DNA RNA histone proteins and chromatin The availability of high throughput profiling methods for quantifying epigenomic modifications in large numbers of samples has enabled us to perform epigenome wide association studies EWAS aimed at screening methylomic variations associated with environmental exposure and disease Thus systematic integration of genetic epigenetic and epidemiological approaches will contribute to improving our understanding of the molecular mechanisms underlying disease phenotypes

Inflammation in Respiratory and Neurological Diseases and the immune-interaction of the lung-brain axis Xiaohuan Xia, 2024-01-18 Despite great advances in diagnosis and treatment that we witnessed in the last decades over a billion people suffer from both respiratory and neurological diseases each year which poses great threats to the public health and economic burden worldwide In many instances the underlying pathogenic mechanisms are still poorly understood which significantly limits the efficacy of therapeutic methods In this regard lines of evidence pinpoint the important role of immunity and inflammation in both respiratory disorders e g pulmonary hypertension chronic obstructive pulmonary disease asthma etc and neurological ones e g neurodegenerative diseases stroke depression etc The accumulation of inflammatory cells and an excess of cytokines and chemokines at the inflammatory site would result from the disturbance of the body's delicate balance between immunity and tolerance Therefore it gives rise to chronic inflammation and autoimmunity underlying the development of both lung and neurological diseases Furthermore the inflammation interaction between lung and brain has been identified suggesting the existence and importance of the lung brain axis in the regulation of immune responses in the lung and brain that contribute to the onset and progression of both respiratory and neurological diseases Nevertheless inflammatory or immunity related risk factors as well novel targets and therapies against inflammation or immunity help early diagnosis and treatment of respiratory and neurological diseases At present the full picture of the molecular mechanisms of how immuno inflammatory activation and the immune cells orchestrate the tissue remodeling leading to respiratory and neurological diseases remains unclear The identification of inflammatory molecules as therapeutic targets or biomarkers are worth further scrutiny to halt the disease progression and monitor the therapeutic interventions
