Solomon,2017-12-02 Many scientists today are working to retard the aging process in humans so as to increase both life expectancy and the quality of life Over the past decade impressive results have been achieved in targeting the mechanisms and pathways of aging In *The Quest for Human Longevity* Lewis D Solomon considers these scientific studies by exploring the principal biomedical anti aging techniques The book also considers cutting edge research on mental enhancements and assesses the scientific doubts of skeptics *The Quest for Human Longevity* is also about business Solomon examines eight corporations pursuing various age related interventions profiling their scientific founders and top executives and examining personnel intellectual property and financing for each firm Academic scientists form the link between research and commerce Solomon notes that the involvement of university scientists and researchers follows one of two models The first is a traditional model in which scientists leave academia to work for a corporation or remain in academia and obtain business support for their research The second is a modern model in which scientists use their intellectual property as a catalyst for acquiring equity interests in the firms they organize Critics have pointed to the dangers of commercialized science but Solomon s analysis on balance finds that the benefits outweigh

the costs and that problems of secrecy and conflicts of interest can be addressed If scientists succeed in unlocking the secrets of aging and developing drugs or therapies that will allow us to live decades longer the consequences for society will include profound social political economic and ethical questions Solomon deals with the public policy aspects of significant life extension and looks at the conflict between those who advocate the acceptance of mortality and the partisans of life The Quest for Human Longevity will be of interest to policymakers sociologists scientists and students Soil Processes and Current Trends in Quality Assessment Maria C. Hernandez Soriano, 2013-02-27 Natural processes and human activities alter the properties and quality of soils over time Nowadays the growing interest in soil protection prompts abundant research to estimate soil quality in wide ranging environmental scenarios The assessment of soil quality entails the evaluation of the capability of a soil to perform its functions in present scenarios but also how those functions can be preserved for future land use Currently soil processes physical chemical and biological properties are recognized as indicators to estimate soil quality Soil processes and current trends in quality assessment provides a wide depiction of current research conducted in soil quality assessment encompassing general studies on soil processes evaluation of significant indicators of soil quality such as soil organic matter dynamic and soil plant interaction while presenting diverse strategies for soil fitness amelioration
