

# NOKIA NOTIFICATIONS (II)

- The process of receiving notifications is straightforward. The application, implementing Client API, registers itself for receiving notifications by sending service specific *sender identification* (sender ID) to Nokia Notifications server.
- Nokia Notifications server responds by sending a device specific *registration identification* (registration ID, RID) to the client device.
- The client application then provides the RID for the 3rd party server, which implements Service API.
- Finally, the 3rd party server can send notifications, via Nokia Notifications server, for the devices whose registration ID it knows. It is the responsibility of the developer to implement a) client application with Client API and b) server with Service API.

huge popularity of the SMS text service for GSM networks It is a departure from the transport mechanism used for SMS which is based on the GSM signalling channels to the use of IP to transport messages within the MMS network To this end MMS has similarities with Internet email and standard IETF protocols As with any new technology it is difficult to accurately predict the position within the next 5 years although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which users will migrate onto the next wave of messaging Significant revenue growth and data usage is expected to be driven by consumer usage of MMS But MMS technology offers more than just a broadening of message content With MMS it is not only possible to send your multimedia messages from one phone to another but also from phone to email and vice versa This feature dramatically increases the possibilities of mobile communication both for private and corporate use Multimedia messaging will reshape the landscape of mobile communication making it more personal more versatile and more expressive than ever before MMS Is the first book to address how MMS and the use of IP to transport messages will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands on experience in the implementation of MMS technology developing billing and delivering services at BT this innovative book will appeal to engineering managers network operators market analysts business decision makers content providers and operator organizations      Mastering Microsoft Lync Server 2010 Nathan Winters,Keith
