

Periodic Table Basics

Step 1: Complete the squares for each element by adding the atomic number, name, and atomic mass.

Write the atomic number at the top of the square.

Write the element's name under the symbol.

Write the atomic mass at the bottom of the square.

Step 2: Determine the number of protons, neutrons, and electrons in each element.

Step 3: Create a Bohr diagram for each element.

Step 4: Draw the Lewis Structure for each element.

The sample card for Boron (B) contains the following information:

- Atomic number: 5
- Symbol: B
- Name: Boron
- Atomic mass: 10.81
- Protons (P): 5
- Neutrons (N): 6
- Electrons (E): 5
- Bohr Diagram: A diagram showing a nucleus with 5 protons and 6 neutrons, and 5 electrons arranged in two shells (2 in the first shell, 3 in the second shell).
- Lewis structure: A diagram showing the element symbol B with five valence electrons represented by dots (one on the left, one on the right, and two on the top).

Step 5: Use the following colors to shade in the square for each element. You should ONLY color in the small square in the upper left-hand corner and not the entire card.

Green = Li & Na

Pink = O & S

Blue = Be & Mg

Purple = F & Cl

Orange = B & Al

Red = C & Si

Tan = N & P

Yellow = He, Ne, & Ar

Step 6: Cut the cards apart and arrange according to atomic number in the pattern shown below. Once you have the cards arranged in the correct order, glue them to a large sheet of construction paper.

Step 7: Answer the questions on the back of this worksheet using the information on your Periodic Table.

Fiber Optic

Communications Shiva Kumar, M. Jamal Deen, 2014-06-12 Fiber optic communication systems have advanced dramatically over the last four decades since the era of copper cables resulting in low cost and high bandwidth transmission. Fiber optics is now the backbone of the internet and long distance telecommunication. Without it we would not enjoy the benefits of high speed internet or low rate international telephone calls. This book introduces the basic concepts of fiber optic communication in a pedagogical way. The important mathematical results are derived by first principles rather than citing research articles. In addition, physical interpretations and real world analogies are provided to help students grasp the fundamental concepts. Key Features: Lucid explanation of key topics such as fibers, lasers and photodetectors. Includes recent developments such as coherent communication and digital signal processing. Comprehensive treatment of fiber nonlinear transmission. Worked examples, exercises and answers. Accompanying website with PowerPoint slides and numerical experiments in MATLAB. Intended primarily for senior undergraduates and graduates studying fiber optic communications, the book is also suitable as a professional resource for researchers working in the field of fiber optic communications.

Integrated Optics Robert G.

Hunsperger, 2013-04-17 Once again it has become necessary to produce a new edition in order to update material provided in earlier editions and to add new descriptions of recently emerging technology. All of the chapters have been revised to include new developments and to incorporate additional literature references. In the past few years there has been a vast expansion of worldwide telecommunications and data transmission networks. In many localities fiber to the home and integrated services digital networks ISDN have become a reality. Many people are now logging on to the Internet and the World Wide Web. The growth of these networks has created a strong demand for inexpensive yet efficient and reliable integrated optic components such as signal splitters, couplers and multiplexers. Because of this demand there has been a great deal of work recently on devices made using polymers and glasses. Descriptions of these components have been added to the book in the appropriate chapters. A number of new practice problems have been added and an updated booklet of problem solutions is available. The supplementary series of videotaped lectures described in the preface to earlier editions continues to be available. Inquiries regarding these materials should be sent directly to the author. The author wishes to thank Mrs Barbara Westog who helped with the organization of new material and typed the revisions.
